Numerical Analysis with Algorithms and Programming Santanu Saha Ray, 2018-09-03. Numerical Analysis with Algorithms and Programming is the first comprehensive textbook to provide detailed coverage of numerical methods, their algorithms, and corresponding computer programs. It presents many techniques for the efficient numerical solution of problems in science and engineering. Along with numerous worked out examples, end of chapter exercises, and Mathematica programs, the book includes the standard algorithms for numerical computation: Root finding for nonlinear equations, Interpolation and approximation of functions by simpler computational building blocks such as polynomials and splines, The solution of systems of linear equations and triangularization, Approximation of functions and least square approximation, Numerical differentiation and divided differences, Numerical quadrature and integration, Numerical solutions of ordinary differential equations (ODEs) and boundary value problems, Numerical solution of partial differential equations (PDEs). The text develops students' understanding of the construction of numerical algorithms and the applicability of the methods. By thoroughly studying the algorithms, students will discover how various methods provide accuracy, efficiency, scalability, and stability for large scale systems.

Numerical Methods for Chemical Engineers with MATLAB Applications A. Constantinides, Navid Mostoufi, 1999. Master numerical methods using MATLAB, today's leading software for problem solving. This complete guide to numerical methods in chemical engineering is the first to take full advantage of MATLAB's powerful calculation environment. Every chapter contains several examples using general MATLAB functions that implement the method and can also be applied to many other problems in the same category. The authors begin by introducing the solution of nonlinear equations using several standard approaches, including methods of successive substitution and linear interpolation, the Wegstein method, the Newton-Raphson method, the Eigenvalue method.
