Flavor Neutrino Oscillations in the T2K Experiment Tatsuya Kikawa,2015-09-18 This book is based on the author s work in the T2K long baseline neutrino oscillation experiment in which neutrinos are generated by a proton beam and are detected by near and far neutrino detectors In order to achieve the precise measurement of the neutrino oscillation an accurate understanding of the neutrino beam and the neutrino interaction is essential Thus the author measured the neutrino beam properties and the neutrino interaction cross sections using a near neutrino detector called INGRID and promoted a better understanding of them Then the author performed a neutrino oscillation analysis using the neutrino beam and neutrino interaction models verified by the INGRID measurements As a result some values of the neutrino CP phase are disfavored at the 90% confidence level If the measurement precision is further improved we may be able to discover the finite CP phase which involves the CP violation Thus this result is an important step towards the discovery of CP violation in the lepton sector which may be the key to understanding the origin of the matter antimatter asymmetry in the universe *Genie Civil* ,1930
