

Geology 103
Homework – Relative Dating & Geologic Maps
EXAMPLES

NAME _____

Examine the geologic cross sections which follow, and determine the relative ages of the rock bodies, lettered features such as faults or surfaces of erosion, and other events such as tilting, folding, or erosion events. Always start with the oldest rock and work toward the present. List the letters in order, with the oldest at the bottom.

For each of the relative dating diagrams, you are to think about them like the side view of a layer cake. In general, the oldest units are on the bottom and the youngest units are on the top. There can be lots of complexities, such as folding events, faulting, erosion events, intrusion by magma, etc. You have to put these events into the order in which they occurred, starting with the oldest, and working toward the youngest. Figure out "what cuts what". If a fault cuts a bed, then the bed is older than the fault.

For Block A above, the sedimentary units are in sequence, P, K, M, and S. Then something happened. A body of magma (INTRUSION R) has intruded or cut through all of the previous layers. So it comes next in the sequence.

The intrusion is eroded off at the top. (The previous layers are eroded off at the top too.) So the event *after* the intrusion is EROSION A.

After EROSION A, beds B, J, and F were deposited.

So your answer for this would be: P, K, M, S, intrusion R, erosion A, B, J, F.

Let's look at Block B. There are no letters or numbers on it. But you could either label the diagram A, B, C, starting at the bottom, or even easier, describe the units in order.

You can see that units green, red, blue, green, red, blue, green, blue, green were deposited. Then FOLDING EVENT A occurred. Then EROSION N occurred. Then units brown, orange, and yellow were deposited. And that is the solution to the second problem.
