**Functional Movement Development Across the Life Span** Donna Joy Cech, Suzanne Tink Martin, 2011-09-06 Providing a solid foundation in the normal development of functional movement *Functional Movement Development Across the Life Span* 3rd Edition helps you recognize and understand movement disorders and effectively manage patients with abnormal motor function. It begins with coverage of basic theory, motor development and motor control and evaluation of function, then discusses the body systems contributing to functional movement and defines functional movement outcomes in terms of age, vital functions, posture and balance, locomotion, prehension and health and illness. This edition includes more clinical examples and applications and updates data relating to typical performance on standardized tests of balance. Written by physical therapy experts Donna J Cech and Suzanne Tink Martin, this book provides evidence based information and tools you need to understand functional movement and manage patients' functional skills throughout the life span. Over 200 illustrations, tables and special features clarify developmental concepts, address clinical implications and summarize key points relating to clinical practice. A focus on evidence based information covers development changes across the life span and how they impact function. A logical, easy to read format includes 15 chapters organized into three units covering basics, body systems and age related functional outcomes respectively. Expanded integration of ICF International Classification of Function aligns learning and critical thinking with current health care models. Additional clinical examples help you apply developmental information to clinical practice. Expanded content on assessment of function now includes discussion of participation level, standardized assessments and assessments of quality of life scales. More concise information on the normal anatomy and physiology of each body system allows a sharper focus on development changes across the lifespan and how they impact function. **Functional Evaluation of Stroke Patients** Naoichi Chino, John L. Melvin, 2012-12-06 Stroke is one of the major causes of disability in the world. Consequently, an effective rehabilitation regimen is the goal of specialists working in the field worldwide. The implementation of rehabilitation programs for the stroke patient is broad in scope and requires first of all an objective scientific evaluation method. In 1980 the World Health Organization developed the International Classification of Impairments, Disabilities and Handicaps. It categorized impairments and disabilities on the basis of functional evaluation but took into account cultural and socio-economic factors when defining handicaps, thus making it difficult to use the same functional evaluation instrument for the three phenomena. In this monograph, experts in the treatment of stroke from Japan, the United States and Europe share their ideas presented during the 31st Annual Convention of the Japanese Association of Rehabilitation Medicine held in June 1994. All the participants freely contributed their views.
