Name: Jasmin Brown

Date: 12-11-20

Student Exploration: Cell Division

Vocabulary: cell division, centriole, centromere, chromatid, chromatin, chromosome, cytokinesis, DNA, interphase, mitosis

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Cells reproduce by splitting in half, a process called **cell division**. What do cells need to do between divisions to make sure that they don't just get smaller and smaller?

They need to grow.

2. The genetic information of a cell is carried in its **DNA** (short for deoxyribonucleic acid). What do cells need to do between divisions to make sure that a full set of DNA gets passed on to each daughter cell?

The DNA has to be copied so there is a full set of DNA to pass on to each daughter cell.

Gizmo Warm-up

On the SIMULATION pane of the *Cell Division Gizmo*, check that the **Cycle Length** is set to 12 hours. Click **Play** (▶), observe until the maximum number of cells is shown, and then click **Pause** (⏸).

1. Look at the cells. Do they all look the same? **no**
2. Cells that are in the process of dividing are said to be in **mitosis** or **cytokinesis**. Cells that are not dividing are in **interphase**.

Check the **Magnify** box and move the cursor over the cells.

- A. Of the 100 cells shown, how many are in the process of dividing? **About 5**
- B. Select the BAR CHART tab, and turn on **Show numerical values**. How many cells are in the interphase stage of their life cycle? **About 80**
- C. Based on these two observations, would you say that a cell spends most of its life

The New York Times Index ,2000 *Cell Growth and Cell Division* R. J. C. Harris,2014-07-15 Cell Growth and Cell Division is a collection of papers dealing with the biochemical and cytological aspects of cell development and changes in bacterial plant and animal systems One paper discusses studies on the nuclear and cytoplasmic growth of ten different strains of the genus *Blepharisma* in which different types of nutrition at high and low temperatures alter the species to the extent that they became morphologically indistinguishable The paper describes the onset of death at high and low temperatures as being preceded by a decrease in the size of the cytoplasm and a corresponding decrease in the size of the macronucleus The moribund organisms still possessing structure are motionless with no distinguishable macronuclear materials Another paper presents the response of meiotic and mitotic cells to azaguanine chloramphenicol ethionine and 5 methyltryptophan The paper describes the failure of spindle action arrest of second division inhibition of cytokinesis aberrant wall synthesis and alterations in chromosome morphology in meiosis cells In the case of mitosis a single enzyme thymidine phosphorylase shows that reagents which inhibit protein synthesis also inhibit the appearance of that enzyme if the reagent is applied one day before it normally appears Other papers discuss control mechanisms for chromosome reproduction in the

Multiplication and Division in Mammalian Cells Renato Baserga,1976 Cell Cycle and Cell Differentiation J. Reinert,H. Holtzer,2013-06-29 It is instructive to compare the response of biologists to the two themes that comprise the title of this volume The concept of the cell cycle in contra distinction to cell division is a relatively recent one Nevertheless biologists of all persuasions appreciate and readily agree on the central problems in this area Issues ranging from mechanisms that initiate and integrate the synthesis of chromosomal proteins and DNA during S phase of mitosis to the manner in which assembly of microtubules and their interactions lead to the segregation of metaphase chromosomes are readily followed by botanists and zoologists as well as by cell and molecular biologists These problems are crisp and well defined The current state of cell differentiation stands in sharp contrast This one of the oldest problems in experimental biology almost defies definition today The difficulties arise not only from a lack of pertinent information on the regulatory mechanisms but also from conflicting basic concepts in this field One of the ways in which this situation might be improved would be to find a broader experimental basis including a better understanding of the relationship between the cell cycle and cell differentiation Dynamics of Cell Division Sharyn A. Endow,David M. Glover,1998-10-01 This volume focuses on the structural aspects of cell division concentrating on both nuclear division meiosis and mitosis and cytoplasmic division cytokinesis Written as a companion volume to the earlier book in the series Cell Cycle Control this book provides an up to date account of developments in this exciting area of cell biology *The Cell in Mitosis* Laurence Levine,2012-12-02 The Cell in Mitosis is a collection of papers presented at the First Annual Symposium held on November 6 8 1961 under the provisions of The Wayne State Fund Research Recognition Award Contributors focus on the complexities posed by the cell in division and consider topics such as the chemical prerequisites for cell division the role of the centriole in division cycles development of the cleavage furrow chemical aspects of the isolated mitotic apparatus histone variability and actin polymerization This volume is organized into 11 chapters and begins with an overview of cell division with reference to the basic essential mechanisms of mitogenesis underlying the emergence of the elegant geometries of mitosis An account of the congression of chromosomes onto metaphase configuration and progression through telophase is also given The next chapters explore the identity and role of the centriole in the whole life cycle of cell behavior the fine structure of animal cells during cytokinesis the mechanism of saltatory particle movements during mitosis and how chemical and physical agents disrupt the mitotic cycle A chapter is devoted to the holotrichous ciliate *Tetrahymena pyriformis* paying attention to its fine structure during mitosis This book will be of interest to physiologists electron microscopists light microscopists biochemists and others who want to know more about the various aspects of cell division *The Cell Division Cycle* David Lloyd,Robert

K. Poole, Steven W. Edwards, 1982 **Cell Division Machinery and Disease** Monica Gotta, Patrick Meraldi, 2017-06-09 This book critically evaluates the causal link between cell division machinery and disease Further it identifies key open questions in the field and the means for exploring them Throughout the various chapters internationally known contributors present the evidence for and against a causal link between key elements of the cell division machinery and diseases such as cancer neuropathologies aging and infertility A more clinically oriented chapter further discusses the current and future applications of anti mitotic drugs in these diseases Cell Division Machinery and Disease is essential reading for graduate or advanced graduate students researchers or scientists working on cell division as well as clinicians interested in the molecular mechanisms of the discussed diseases **Mechanisms and Control of Cell Division** Thomas L. Rost, Ernest M. Gifford, 1977 *Asymmetric Cell Division in Development, Differentiation and Cancer* Jean-Pierre Tassan, Jacek Z. Kubiak, 2017-04-12 This book provides readers with an overview of the frequent occurrence of asymmetric cell division Employing a broad range of examples it highlights how this mode of cell division constitutes the basis of multicellular organism development and how its misregulation can lead to cancer To underline such developmental correlations readers will for example gain insights into stem cell fate and tumor growth In turn subsequent chapters include descriptions of asymmetric cell division from unicellular organisms to humans in both physiological and pathological conditions The book also illustrates the importance of this process for evolution and our need to understand the background mechanisms offering a valuable guide not only for students in the field of developmental biology but also for experienced researchers from neighboring fields **Cell Division and Heredity** Roger Kemp, 1972 *Dynamics of Cell Division* Sharyn A.
