**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

*[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]*

1. Two pots have been sitting on the stove for a while. One pot has a copper handle and the other has a wooden handle. Which handle would you rather touch? Why?

*The wooden handle would be better to touch because the copper handle will be very hot.*

2. One of the pots is filled with soup. The soup at the bottom of the pot is warmed by the stove burner, but how does the soup at the top get hot?

*Answers will vary. [The soup at the top is warmed by mixing with the soup at the bottom.]*

### Gizmo Warm-up

The *Conduction and Convection* Gizmo shows two flasks of colored water, one blue and one yellow. Select **Copper** and **Solid chunk** from the dropdown lists. (This means the two flasks are separated by a solid piece of copper, and the two liquids cannot touch each other.)

1. Use the sliders to make one flask hotter than the other. Click **Play** (▶). What happens?

*The hotter flask slowly gets cooler, and the cooler flask slowly gets hotter.*

2. Select the **DATA** tab and look at the graph. What do the blue curve and the yellow curve represent?

- A. The blue curve represents *the temperature of the blue fluid.*
- B. The yellow curve represents *the temperature of the yellow fluid.*

3. What is the final temperature of the top flask? \_\_\_\_\_ Bottom flask? \_\_\_\_\_

*Answers will vary depending on the initial temperatures. [The temperature of each flask will change by the same amount. Eventually, given enough time, the temperatures of both flasks will be the same. This may not always be possible in this Gizmo given its time constraints.]*
