ABOUT GLASSFISH

The use of GlassFish application server is growing, and having a reference card for day-to-day jobs is inevitable. Looking for a simple command to perform a specific job can take time but by using this refcard, you won't need to look for any commands or lose time searching in countless pages of manuals and administration references. This refcard covers administration, security, and performance management topics.

WHAT IS GLASSFISH?

GlassFish is a Java EE application server which is hosted on Java.net and mainly sponsored by Sun Microsystems. GlassFish usually has full support of the latest Java EE related JSRs. It is accessible both under GPL and CDDL licenses.

What makes it different from other products:

- Support for the latest web services specification in addition to proven interoperability with Microsoft WCF.
- Support for both older and newer versions of EJBs.
- Cluster wide management and deployment.
- High availability both with in-memory replication and persisted replication using HADB.
- Fine grained monitoring API based on JMX in addition to already available monitoring facilities in its administration console.
- Support for Ruby on Rails, in addition to PHP support, using Quercus makes GlassFish a suitable application server for hosting heterogeneous applications.

WHERE TO GET GLASSFISH

Usually more than one version of GlassFish is available for download, which includes the current stable version, the previous stable version with all patch and post ported features, and development builds of the next GlassFish version. You should choose the current version unless you are looking for a maintenance release for past versions, or you are eager to check out new JSRs or functionalities.

Downloading the right version of GlassFish: If you are going to deploy some applications in a production environment you should choose a current stable version. And if you have a very mission critical application, but you do not require to have the latest standards, go with the previous stable version. Development versions are only suitable for experimental tasks and not for production. The current version of GlassFish is GlassFish Version 2, update release 2, which is available at: <https://glassfish.dev.java.net/downloads/v2ur2-b04.html>.

Distribution packages are available for six different operating systems as follows:

Operating System	English Language Distribution Package	Multilingual Distribution Package
Solaris SPARC Platform	glassfish-installer-v2ur2-b04-sunos.jar	glassfish-installer-v2ur2-b04-sunos-ml.jar
