### Conclude and Apply

- No, each student did not have the same power rating. There is a great deal of variation in mass and in time taken to ascend the stairs.
- Power vs. Work and Power vs. Time
- Both show a definite relationship because Power is defined by work and time.
- Power is the quotient found when work done is divided by the time required to complete that work.

### Going Further

- You can either increase the mass you will transport or the distance you will climb (while keeping time constant) or decrease the time it takes to ascend the stairs (while keeping mass and distance constant)
- The fastest climbers may have had a very small mass.
- The most massive climbers may have been very slow.
- Answers will vary.

### Real-World Physics

- Some students may find they will be able to power a 120 W television or a 60.0 W radio.
- Students may find they can generate 6.0 kWh, which would earn them \$0.36.
- There would either have to be a weight sensor or climbers would have to enter their weight. The machine could also have sensors to measure the distance climbed and the time so that power could be calculated.
