Resources in Education, 1990 **Extending Intelligence** Patrick C. Kyllonen, Richard D. Roberts, Lazar Stankov, 2008
This volume presents research from a variety of perspectives on the enhancement of human intelligence. It is organized around five themes: enhancement via instruction, enhancement via development over the life cycle, enhancement over time, enhancement via new constructs, and new directions in enhancement. Three key issues are addressed. First, although most of the scientific research on intelligence has concerned what it is, this volume attends to the consequential societal and economic issue concerns of whether it can be increased and how. Second, intellectual enhancement is particularly important when targeted to minorities and the poor groups that have typically performed relatively less well on intelligence and achievement measures. This volume reflects the education community's ongoing interest in understanding and attempting to close achievement or test score gaps. Third, most of the attention to examining intellectual enhancement and in accounting for and closing the test score gap has focused on general cognitive ability. In line with the current emphasis on considering intelligence from a wider perspective, this volume includes constructs such as emotional and practical intelligence in definitions of intellectual functioning. *Extending Intelligence: Enhancement and New Constructs* is an essential volume for researchers, students, and professionals in the fields of educational psychology, intelligence, educational measurement, and assessment, and critical thinking.

University Access and Success Merridy Wilson-Strydom, 2015-02-11
The challenge of widening access and participation in higher education in a manner that ensures students are successful in their studies is a major issue globally and a significant research focus within higher education studies and higher education policy. Similarly, the challenge of under-preparedness of students entering higher education has become increasingly pertinent as universities in both developed and developing countries struggle to improve their throughput rates in a context in which schooling no longer seems to provide sufficient preparation for entering university. In this book, Merridy Wilson-Strydom applies the capabilities approach to better understand university access and participation and draws on a rich case study from South Africa to critically and innovatively explore the complex and contradictory terrain of access with success. The book integrates quantitative and qualitative research with theory and practical application to provide a new framework for considering and improving the transition from school to university. *University Access and Success* will appeal to academics and researchers in the field of higher education internationally. The book also contributes to the growing body of international and comparative scholarship on the capabilities approach in higher education and will therefore be of value to higher education practitioners such as those working in the promotion of teaching and learning, higher education quality assurance, institutional research, and student affairs.
