

Exploring Plate Tectonics by Using Graham Crackers

Background Information - Plate boundaries are found at the edge of the plates. There are three types:

1. Convergent

- Places where plates crash or push together. Mountains, earthquakes, and volcanoes form where plates collide.
- When oceanic plates collide with continental plates, the less dense oceanic moves under the continental plate in a process called subduction.
- When two continental plates collide, mountains form.

2. Divergent

- Places where plates are moving apart, forming rift valleys.

3. Transform

- Places where plates slide past each other, the sliding motion causes earthquakes.

Procedure & Questions:

1. Spread a thick layer of frosting on the paper plate. The frosting will represent magma.
2. Break your cracker into 4 sections.
3. Wet the end of one section with water.
4. Gently put the wet cracker sections and a dry cracker section (this represents a continental plate) on the layer of frosting. The wet cracker represents an oceanic plate and the dry cracker represents a continental plate.
5. Push the wet cracker and a dry cracker together. Record your observations in a diagram.
