Building a Flower

Imagine a “Metallic Flower” rising into the sky in a field of old factories. Such a flower has grown into a reality in the form of Frank Gehry’s Guggenheim Museum in Bilbao, Spain. The building’s most striking feature is an immense roof constructed of curving, twisting metal that reminds people of a flower.

This building is a result of a process that began with an international competition. The competition invited leading architects to design a building that would blend with the Bilbao skyline and be different from all other buildings in the world. While Frank Gehry’s winning design reminds some people of the unusual shape of New York City’s Guggenheim Museum, it has elements all its own.

The roof’s unusual sculpted curving shape required careful planning. First, Mr. Gehry built a wood and paper model of the museum. Next, he entered mathematical data about the curves of the model’s walls and roof into a computer. Mr. Gehry said afterwards that the computer was essential to turning his designs into reality.
