Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Endocrine-Related Low-Dose Toxicity, 2017-08-14 To safeguard public health the US Environmental Protection Agency EPA must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision making For decades the agency has dealt with questions about what animal testing data to use to make predictions about human health hazards how to perform dose response extrapolations how to identify and protect susceptible subpopulations and how to address uncertainties As alternatives to traditional toxicity testing have emerged the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods Endocrine active chemicals EACs have raised concerns that traditional toxicity testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function and small alterations in hormone concentrations particularly during sensitive life stages can have lasting and significant effects To address concerns about potential human health effects from EACs at low doses this report develops a strategy to evaluate the evidence for such low dose effects

Current Advances in Fusarium Wilt Mahyar Mirmajlessi, Inmaculada Larena, María Del Mar Guerrero, María Del Carmen Rodríguez-Molina, 2025-10-24 Fusarium is a large cosmopolitan genus of imperfect fungi that includes a wide spectrum of phylogenetically diverse and widespread fungi It has a highly complex and often unresolved taxonomy This is also one of the most important mycotoxigenic fungal genera in food and feed Fumonisin zearalenone and deoxynivalenol trichothecenes are well known Fusarium mycotoxins Fusarium species have widespread distribution as they can grow and develop on a wide range of substrates They also have efficient spore dispersal mechanisms The genus Fusarium which contains at least 300 phylogenetically distinct species species complexes includes several economically significant phytopathogenic species such as *F. oxysporum*, *F. solani*, *F. fujikuroi* and *F. graminearum* Of these species *F. oxysporum* is considered one of the most economically critical worldwide Since the pathogen can exist in soil and plant debris in the form of mycelia and microsclerotia and survive as resistant chlamydospores for many years under adverse conditions management of Fusarium wilt remains a challenge Because of the increasing need for long term strategies for disease minimization preferably by enhancing natural control mechanisms many key aspects of the disease need to be further investigated Besides this pathogen has received significant attention for more than a century Agronomic practices can only decrease inoculum transmission and do not control disease satisfactorily Likewise neither soil fumigation nor fungicide application is recommended For this

reason it is imperative to find new effective control alternatives such as biological control using antagonistic fungi Disease management and infection control require that these economically destructive fungi be identified accurately and rapidly However numerous molecular phylogenetic studies over the past two decades have established that morphological species recognition frequently fails to distinguish many fusaria discovered employing genealogical concordance and phylogenetic species recognition This Research Topic will give an overview of the latest advances in Fusarium wilt Researchers are invited to submit Original Research Methods Review Mini Review and Perspective manuscripts that provide insights into the biology of both the pathogen and host plant around it This includes those using omics approaches Authors are welcome to submit in the following but not limited to areas Advances in pathogen population dynamics Genetic diversity Ecological characteristics Epidemiology and etiology of Fusarium wilt Pathogenicity and virulence mechanisms Biosynthetic pathways Management of Fusarium wilt through rapid diagnostic methods early detection Soil and crop management sustainable disease control strategies agronomic practices and novel methods for the isolation identification and quantification of the causal agent of Fusarium wilt among other relevant topics Please note that purely descriptive studies and Brief Research Reports are not accepted for this collection
