

Find the functional values $f(-2)$, and $f(3)$ for the function:
 $f(x) = x^2 + 1$

This problem involves 2 steps because you are asked to find two values for the function. You must evaluate for $f(-2)$ and $f(3)$.

Step 1: $f(x) = x^2 + 1$

find $f(-2)$

Original Problem

$$f(-2) = (-2)^2 + 1$$

Substitute (-2) for x in the original function

$$f(-2) = 4 + 1$$

Evaluate!

$$f(-2) = 5$$

This is your answer to part 1.

Step 2: $f(x) = x^2 + 1$

find $f(3)$

Original Problem

$$f(3) = 3^2 + 1$$

Substitute 3 for x in the original function.

$$f(3) = 9 + 1$$

Evaluate!

$$f(3) = 10$$

This is your answer to part 2.

Our final solution to the function, $f(x) = x^2 + 1$ is:

$$f(-2) = 5$$

&

$$f(3) = 10$$

This means:

If we substitute -2 for x
We get an answer of 5

If we substitute 3 for x
We get an answer of 10

Foundations of Reinforcement Learning with Applications in Finance Ashwin Rao, Tikhon Jelvis, 2022-12-16

Foundations of Reinforcement Learning with Applications in Finance aims to demystify Reinforcement Learning and to make it a practically useful tool for those studying and working in applied areas especially finance Reinforcement Learning is emerging as a powerful technique for solving a variety of complex problems across industries that involve Sequential Optimal Decisioning under Uncertainty Its penetration in high profile problems like self driving cars robotics and strategy games points to a future where Reinforcement Learning algorithms will have decisioning abilities far superior to humans But when it comes getting educated in this area there seems to be a reluctance to jump right in because Reinforcement Learning appears to have acquired a reputation for being mysterious and technically challenging This book strives to impart a lucid and insightful understanding of the topic by emphasizing the foundational mathematics and implementing models and algorithms in well designed Python code along with robust coverage of several financial trading problems that can be solved with Reinforcement Learning This book has been created after years of iterative experimentation on the pedagogy of these topics while being taught to university students as well as industry practitioners Features Focus on the foundational theory underpinning Reinforcement Learning and software design of the corresponding models and algorithms Suitable as a primary text for courses in Reinforcement Learning but also as supplementary reading for applied financial mathematics programming and other related courses Suitable for a professional audience of quantitative analysts or data scientists Blends theory mathematics programming algorithms and real world financial nuances while always striving to maintain simplicity and to build intuitive understanding To access the code base for this book please go to https://github.com/TikhonJelvis/RL_book
