Fast Radial Basis Functions for Engineering Applications Marco Evangelos Biancolini, 2018-03-29 This book presents the first How To guide to the use of radial basis functions RBF It provides a clear vision of their potential an overview of ready for use computational tools and precise guidelines to implement new engineering applications of RBF Radial basis functions RBF are a mathematical tool mature enough for useful engineering applications Their mathematical foundation is well established and the tool has proven to be effective in many fields as the mathematical framework can be adapted in several ways A candidate application can be faced considering the features of RBF multidimensional space including 2D and 3D numerous radial functions available global and compact support interpolation regression This great flexibility makes RBF attractive and their

great potential has only been partially discovered This is because of the difficulty in taking a first step toward RBF as they are not commonly part of engineers cultural background but also due to the numerical complexity of RBF problems that scales up very quickly with the number of RBF centers Fast RBF algorithms are available to alleviate this and high performance computing HPC can provide further aid Nevertheless a consolidated tradition in using RBF in engineering applications is still missing and the beginner can be confused by the literature which in many cases is presented with language and symbolisms familiar to mathematicians but which can be cryptic for engineers The book is divided in two main sections The first covers the foundations of RBF the tools available for their quick implementation and guidelines for facing new challenges the second part is a collection of practical RBF applications in engineering covering several topics including response surface interpolation in n dimensional spaces mapping of magnetic loads mapping of pressure loads up scaling of flow fields stress strain analysis by experimental displacement fields implicit surfaces mesh to cad deformation mesh morphing for crack propagation in 3D ice and snow accretion using computational fluid dynamics CFD data shape optimization for external aerodynamics and use of adjoint data for surface sculpting For each application the complete path is clearly and consistently exposed using the systematic approach defined in the first section
