Learning Objectives

- 1. Explain how an animal organism responds to its environment.
- 2. Explain how a plant/animal organism responds to its environment.

Learning Objectives

These cells are an organism's **homeostatic** single cell homeostatic. Single cells organisms need to take energy and all the nutrients necessary for life.

- 1. Homeostatic organisms respond to **stimuli** in their environment. Stimuli are external conditions that provide information to the organism's homeostatic system (e.g., temperature).
- 2. Homeostatic organisms maintain their internal environment.
- 3. Homeostatic organisms give their responses to stimuli (e.g., behavior).

1. Homeostatic Cells and Homeostatic Organisms are Single-celled and Specialized

- 1. The cells of homeostatic organisms have specialized for particular tasks and interactions with their environment in various organisms.
- 2. Homeostatic organisms respond to external and internal stimuli.
 - a. In humans, a group of specialized cells produce reproductive hormones.
 - b. In plants, a group of cells in the root system produce auxin, a growth hormone.
 - c. In animals, a group of cells in the brain produce reproductive hormones.
- 3. The cells of homeostatic organisms interact with their environment.
 - a. Homeostatic cells are specialized to work with their environment.
 - b. Cells with their own membranes, as well as internal organelles, allow them to interact with their environment and respond to stimuli (e.g., temperature, light, and nutrients).
 - c. Cells with their own membranes and organelles (e.g., nucleus) allow them to produce their own energy.
 - d. Cells with their own membranes and organelles (e.g., nucleus) allow them to produce their own energy.

The Cell as an Organism

The structure of a cell is essential to its function. The structure of a cell is essential to its function.

- 1. The cell is the basic unit of structure and function of all organisms.
- 2. The cell is the basic unit of structure and function of all organisms.

Gene Expression and Regulation in Mammalian Cells Fumiaki Uchiyama, 2018-02-28. Sixty years after the central dogma, great achievements have been developed in molecular biology. We have also learned the important functions of noncoding RNAs and epigenetic regulations. More importantly, whole genome sequencing and transcriptome analyses enabled us to diagnose specific diseases. This book is not only intended for students and researchers working in laboratory but also physicians and pharmacists. This volume consists of 14 chapters divided into 4 parts. Each chapter is written by experts investigating biological stresses, epigenetic regulation, and functions of transcription factors in human diseases. All articles presented in this volume by excellent investigators provide new insights into the studies in transcriptional control in mammalian cells and will inspire us to develop or establish novel therapeutics against human diseases.
