Silicon Photonics Design Lukas Chrostowski, Michael Hochberg, 2015-03-12 This hands on introduction to silicon photonics engineering equips students with everything they need to begin creating foundry ready designs Photonic Crystals Igor A. Sukhoivanov, Igor V. Guryev, 2009-09-21 The great interest in photonic crystals and their applications in the last 15 years is being expressed in the publishing of a large number of monographs collections textbooks and tutorials where existing knowledge concerning operation principles of photonic crystal devices and microstructured fibers their mathematical description well known and novel applications of such technologies in photonics and optical communications are presented They challenge authors of new books to cover the gaps still existing in the literature and highlight and popularize of already known material in a new and original manner Authors of this book believe that the next step towards wide application of photonic crystals is the solution of many practical problems of design and computation of the specific photonic crystal based devices aimed at the specific technical application In order to make this step it is necessary to increase the number of practitioners who can solve such problems independently The aim of this book is to extend the group of researchers developers and students who could practically use the knowledge on the physics of photonic crystals together with the knowledge and skills of independent calculation of basic characteristics of photonic crystals and modeling of various elements of integrated circuits and optical communication systems created on the basis of photonic crystals The book is intended for qualified readers specialists in the field of optics and photonics students of higher courses master degree students and PhD students As an introduction to the subject the book contains the basics of wave optics and radiation propagation in simple guiding media such as planar waveguides and step index fibers

Tunable Fiber Bragg Grating Using Evanescent Field Coupling Jae-yoon Jeong,2001 In this work we present experimental results on tenability of fiber Bragg grating incorporating evanescent field coupling Evanescent field is the exponentially decaying part of an optical mode formed in a waveguide A section of fiber with a Bragg grating written in it is side polished until most of the cladding is removed The evanescent field is modified by applying different index matching oil and by placing a dielectric material on the polished area of the fiber A tunability as much as 5 nm was demonstrated as the applied index matching oil varied from $n = 1.40$ to $n = 1.45$ Polarization dependent behavior of the device was also measured and it was found out that the polarization component that is perpendicular to the polished surface experiences severe loss A prototype tunable grating device incorporating a MEMS structure is also discussed
