This book presents in a very compact way the fundamental aspects of financial mathematics. It provides the key concepts and tools a student needs to master the Exam FM of the Society of Actuaries (SOA) and the Exam 2 of the Casualty Actuarial Society (CAS). This text benefits from the vision and experience of the author, who is a professor who has taught finance, insurance, and risk management for many years. The author is also a Fellow of the Society of Actuaries. Students interested in econometrics, finance, statistics, mathematics, or other fields will also find this book a useful tool to help them further their studies. This book can also be warmly recommended as a prerequisite reading to the students who consider taking or are in the process of taking the Chartered Financial Analyst (CFA) exams. Indeed, the fixed income and company valuation material studied in the CFA syllabus is fundamentally based on the financial mathematics results shown in this book. This text does not just present the material; it furthers an understanding of the foundations of financial mathematics. This book does not include exercises because it is designed to be used with the long series of exercises made freely available by the Society of Actuaries. The tables in the appendix link the exercises of the Society of Actuaries with the equations in the book. These tables can be a very convenient tool for providing hints for the exercises that the student cannot solve instead of going directly to the solutions. The order in which the contents of this book are presented mostly respects the order of the Society of Actuaries and Casualty Actuarial Society syllabi. Very few adjustments were made to this order, and they were done for pedagogical improvement reasons only. This text is the second one in a series dedicated to actuarial associateship exams. In each of these books, conceptual links between the contents of the various exams are provided. This book was also written in such a way that you can use it throughout your career. This

book is the book the author would have liked to have when he took the Exam FM of the Society of Actuaries It contains all the formulas that are useful to solve the official exercises of the SOA This book is compact theoretically solid and not verbose To benefit fully from this book a mathematical background of at least one year of calculus after A level is needed *Wiley CPA Examination Review, Financial Accounting and Reporting* Patrick R.
