very complex problems which are constantly changing and often ill structured making modeling and analysis difficult In  
order to provide support for the decision makers computer based information systems are designed to collect store process  
and transport information Recent advances in computer technol ogy data communications database systems office  
automation and knowledge engineering have made possible the design of very sophisticated information sys tems However  
rapid technological advances also create many problems not the least of which is the lack of integration among the various  
disciplines in infor mation system design Without such integration a costly computer based infor mation system is at best  
partially useful and at worst totally useless The aim of this book therefore is to examine the various issues involved in  
designing man agement information systems decision support systems and office information systems for increasing  
productivity and providing decision support This book is the outcome of the Workshop on Management and Office Infor  
mation Systems which was organized by the Knowledge Systems Institute and held at Chicago Illinois from June 28 to 30  
1982 Twenty seven papers from the working papers presented at that workshop were selected for inclusion in the present
