

## Concrete Problems for Teachers

Many more mathematical relationships are provided by the discussion of these games in this activity; you will probably generate additional relationships yourself in this process as you explore the materials.

Children and adults may use the materials to create their own activities. There are small amounts of paper, string, tape, a drawing board, and other resources. Adult activities require materials readily available. Children may also be interested in creating a picture book about the relationships between the materials and activities. The materials themselves are useful in building an understanding and practice of mathematical concepts and processes related to the patterns of numbers in which children are building relationships and learning to identify patterns in building activities and language related.

1. A relationship is provided that involves a mathematical relation provided using the small paper cubes. What are all the relationships you can find with the materials provided that involve the number 3, 4, or 5? (You may use the materials to help you.)

a. What is the relationship that you find with 3 cubes?

b. What is the relationship with 4 cubes?

c. What patterns and relationships can you find with the 5 cubes?

2. Reflective like activities are provided with a picture activity, all the relationships are given in which a child's understanding is that the use of the given materials is provided in a pattern of their construction. What are the relationships you find with the materials provided that involve the number 3, 4, or 5? (You may use the materials to help you.)

a. What patterns and relationships do you find with 3 cubes?
