Cannon,2021-03-22 Reservoir management is fundamental to the efficient and responsible means of extracting hydrocarbons and maximising the economic benefit to the operator licence holders and central government All stakeholders have a social responsibility to protect the local population and environment The process of managing an oil or gas reservoir begins after discovery and continues through appraisal development production and abandonment there is cost associated with each phase and a series of decision gates should be in place to ensure that an economic benefit exists before progress is made To correctly establish potential value at each stage it is necessary to acquire and analyse data from the subsurface the planned surface facilities and the contractual obligations to the end user of the hydrocarbons produced This is especially true of any improved recovery methods proposed or plans to extend field life To achieve all the above requires a multi skilled team of professionals working together with a clear set of objectives and associated rewards The team s make up will change over time as different skills are required as will the management of the team with geoscientists engineers and commercial analysts needed to address the issues as they arise This book is designed as a guide for non specialists involved in the process of reservoir management which is often treated as a task for reservoir engineers alone it is a task for all the disciplines involved in turning a exploration success into a commercial asset Most explorers earn their bonus based on the initial estimates of in place hydrocarbons regardless of the ultimate cost of production the explorers have usually moved on to a new basin before the first oil or gas is produced This book is not a deeply academic tome rather the description of a process enlivened by a number of stories and case studies from the author s forty years of experience in the oil patch
