

# The Cell Membrane and Cell Transport

## Part 1: The Cell Membrane

### The Cell Membrane:

- Recall that the cell membrane is the structure found in both plant and animal cells that controls the movement of materials both into and out of the cell

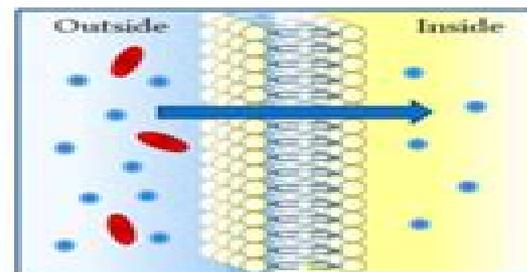

### Functions of the Cell Membrane:

- Separates the contents of the cell from the external environment
- Serves as a barrier for which substances can enter and exit a cell
- Recognizes chemical signals (messages) which will trigger the cell to react in a particular way

### Selective Permeability:

- The cell membrane is considered selectively permeable, which means that some molecules can pass through, and some molecules cannot
- It maintains balance both inside and outside the cell

Some molecules can cross the membrane while other cannot.

### Structure of the Cell Membrane:

- Made up of a double layer of "phospholipids"
- A phospholipid is made of two parts:
  - Phosphate Head - Hydrophilic, or "water-loving"
  - Lipid Tails- Hydrophobic, or "water-fearing" (think oil, a substance that does not dissolve in water)
