

IFT 166 Introduction to Internet Networking

Lab 2

Connecting at OSI Layers 2, and 3 & Network Configuration

Note: If possible, try to complete this lab where you have multiple computers on the same network

Connecting at OSI Layers 2, and 3

Objectives

- To investigate network connections at OSI Layers 2 and 3
- To determine network addressing information on a Windows 8 PC

Boot into Windows operating on a computer (couldn't care which one).
You can also attempt this lab on a MAC (might be a little trickier).

OSI Layer 2 (Data Link layer): Investigating MAC addresses

1. In the Network and Sharing Center, click on Change adapter settings. Right-click one of the network adapter icons and choose Status, then click Details. Look for the MAC address (called the "Physical address") in the window that appears. What is the MAC address of this network adapter?

2. Right-click the other network adapter icon. What is the MAC address of the other network adapter?

3. You can also determine the MAC address from the command prompt. Open the command prompt by typing "cmd" in the metro window.
4. At the command prompt, type ipconfig /all. Scroll up and adjust the window size so you can see the information for both of your network adaptors. Locate the MAC addresses (Physical addresses) for the two network adaptors. Do these match the ones you determined previously?
