Montgomery, Cheryl L. Jennings, Murat Kulahci, James R. Broyles, Christopher J. Rigdon, 2009-03-23 An accessible introduction to the most current thinking in and practicality of forecasting techniques in the context of time oriented data Analyzing time oriented data and forecasting are among the most important problems that analysts face across many fields ranging from finance and economics to production operations and the natural sciences As a result there is a widespread need for large groups of people in a variety of fields to understand the basic concepts of time series analysis and forecasting Introduction to Time Series Analysis and Forecasting presents the time series analysis branch of applied statistics as the underlying methodology for developing practical forecasts and it also bridges the gap between theory and practice by equipping readers with the tools needed to analyze time oriented data and construct useful short to medium term statistically based forecasts Seven easy to follow chapters provide intuitive explanations and in depth coverage of key forecasting topics including Regression based methods heuristic smoothing methods and general time series models Basic statistical tools used in analyzing time series data Metrics for evaluating

forecast errors and methods for evaluating and tracking forecasting performance over time Cross section and time series regression data least squares and maximum likelihood model fitting model adequacy checking prediction intervals and weighted and generalized least squares Exponential smoothing techniques for time series with polynomial components and seasonal data Forecasting and prediction interval construction with a discussion on transfer function models as well as intervention modeling and analysis Multivariate time series problems ARCH and GARCH models and combinations of forecasts The ARIMA model approach with a discussion on how to identify and fit these models for non seasonal and seasonal time series The intricate role of computer software in successful time series analysis is acknowledged with the use of Minitab JMP and SAS software applications which illustrate how the methods are implemented in practice An extensive FTP site is available for readers to obtain data sets Microsoft Office PowerPoint slides and selected answers to problems in the book Requiring only a basic working knowledge of statistics and complete with exercises at the end of each chapter as well as examples from a wide array of fields Introduction to Time Series Analysis and Forecasting is an ideal text for forecasting and time series courses at the advanced undergraduate and beginning graduate levels The book also serves as an indispensable reference for practitioners in business economics engineering statistics mathematics and the social environmental and life sciences

**Introduction to Time Series and Forecasting** Peter J. Brockwell, Richard A. Davis, 2013-03-14 Some of the key mathematical results are stated without proof in order to make the underlying theory accessible to a wider audience The book assumes a knowledge only of basic calculus matrix algebra and elementary statistics The emphasis is on methods and the analysis of data sets The logic and tools of model building for stationary and non stationary time series are developed in detail and numerous exercises many of which make use of the included computer package provide the reader with ample opportunity to develop skills in this area The core of the book covers stationary processes ARMA and ARIMA processes multivariate time series and state space models with an optional chapter on spectral analysis Additional topics include harmonic regression the Burg and Hannan Rissanen algorithms unit roots regression with ARMA errors structural models the EM algorithm generalized state space models with applications to time series of count data exponential smoothing the Holt Winters and ARAR forecasting algorithms transfer function models and intervention analysis Brief introductions are also given to cointegration and to non linear continuous time and long memory models The time series package included in the back of the book is a slightly modified version of the package ITSM published separately as ITSM for Windows by Springer Verlag 1994 It does not handle such large data sets as ITSM for Windows but like the latter runs on IBM PC compatible computers under either DOS or Windows version 3.1 or later The programs are all menu driven so that the reader can immediately apply the techniques in the book to time series data with a minimal investment of time in the computational and algorithmic aspects of the analysis
