Brain Injury Medicine, Third Edition Nathan D. Zasler, Douglas I. Katz, Ross D. Zafonte, 2021-09-01. This updated textbook was much needed as there has been increased attention in recent years toward brain injuries. The book provides updated guidelines and clinical practice recommendations that support the intended audience of trainees and current practitioners. This update makes it the current standard text for any brain injury specialist. Doody's Review Service: 4 stars. This revised and greatly expanded Third Edition of Brain Injury Medicine continues its reputation as the key core textbook in the field, bringing together evidence-based medicine and years of collective author clinical experience in a clear and comprehensive guide for brain injury professionals. Universally praised as the gold standard text and go-to clinical reference, the book covers the entire continuum of care from early diagnosis and assessment through acute management, rehabilitation, associated medical and quality of life issues, and functional outcomes. With 12 new chapters and expanded coverage in key areas of pathobiology and neuro-recovery, special populations, sport concussion, disorders of consciousness, neuropharmacology, and more, this state-of-the-science resource promotes a multi-disciplinary approach to a complex condition with consideration of emerging topics and the latest clinical advances. Written by over 200 experts from all involved disciplines, the text runs the full gamut of practice of brain injury medicine, including principles of public health and research, biomechanics, and neural recovery; neuroimaging and neurodiagnostic testing; sport and military prognosis and outcome; acute care treatment of special populations; neurologic and other medical complications; post-injury motor and musculoskeletal problems; post-trauma pain disorders; cognitive and behavioral problems; functional mobility; neuropharmacology and alternative treatments; community reentry and medicolegal and ethical issues. Unique in its scope of topics relevant to professionals working with patients with brain injury, this third edition offers the most complete and contemporary review of clinical practice standards in the field.

**Key Features:** Thoroughly revised and updated Third Edition of the seminal reference on brain injury medicine. Evidence-based consideration of emerging topics with new chapters covering pathobiology, biomarkers, neurorehabilitation, nursing, neurodegenerative dementias, anoxic/hypoxic/ischemic brain injury, infectious causes of acquired brain injury, neuropsychiatric assessment, PTSD, and capacity assessment. Multi-disciplinary authorship with leading experts from a wide range of specialties, including but not limited to psychiatry, neurology, neurosurgery, neuropsychology, physical therapy, occupational therapy, speech

language pathology and nursing New online chapters on survivorship family perspectives and resources for persons with brain injury and their caregivers Purchase includes digital access for use on most mobile devices or computers *Cerebral Small Vessel Disease* Leonardo Pantoni, Philip B. Gorelick, 2014-05-01 Small vessel disease is an important frontier in neurology about 25% of strokes are classified as small vessel and SVD is the most common cause of vascular cognitive impairment The risk of developing SVD increases with age making this a growing concern for countries with aging populations Despite this there has been a paucity of information about its causes diagnosis prevention and treatment This volume brings together contributions from leading international experts in the field and discusses pathogenesis pathophysiology clinical and radiologic manifestations prevention and treatment modalities and future directions for research and practice Genetic forms of SVD are discussed as well as the rapid development of neuroimaging techniques as tools for screening and treatment This authoritative book is essential reading for neurologists stroke physicians geriatricians and interventional neuroradiologists as well as researchers in the fields of aging and dementia *Time and Causality* Marc J. Buehner, 2014-08-06 The problem of how humans and other intelligent systems construct causal representations from non causal perceptual evidence has occupied scholars in cognitive science for many decades Most contemporary approaches agree with David Hume that patterns of covariation between two events of interest are the critical input to the causal induction engine irrespective of whether this induction is believed to be grounded in the formation of associations Shanks Dickinson 1987 rule based evaluation White 2004 appraisal of causal powers Cheng 1997 or construction of Bayesian Causal Networks Pearl 2000 Recent research however has repeatedly demonstrated that an exclusive focus on covariation while neglecting contiguity another of Hume's cues results in ecologically invalid models of causal inference Temporal spacing order variability predictability and patterning all have profound influence on the type of causal representation that is constructed The influence of time upon causal representations could be seen as a bottom up constraint though current bottom up models cannot account for the full spectrum of effects However causal representations in turn also constrain the perception of time Put simply two causally related events appear closer in subjective time than two equidistant unrelated events This reversal of Hume's conjecture referred to as Causal Binding Buehner Humphreys 2009 is a top down constraint and suggests that our representations of time and causality are mutually influencing one another At present the theoretical implications of this phenomenon are not yet fully understood Some accounts link it exclusively to human motor planning appealing to mechanisms of cross modal temporal adaptation or forward learning models of motor control However recent demonstrations of causal binding in the absence of human action and analogous binding effects in the visual spatial domain challenge such accounts in favour of Bayesian Evidence Integration This Research Topic reviews and further explores the nature of the mutual influence between time and causality how causal knowledge is constructed in the context of time and how it in turn shapes and alters our perception of time We draw together literatures from the perception and cognitive

science as well as experimental and theoretical papers Contributions investigate the neural bases of binding and causal learning perception methodological advances and functional implications of causal learning and perception in real time
