

Dragon Genetics

— Independent Assortment and Genetic Linkage

Hereditary traits are passed from one generation to the next. Genes are the instructions that tell a cell how to make a particular trait. Genes are located on chromosomes.

In this activity you will study the patterns of inheritance of multiple genes in (imaginary) dragons. These dragons have two pairs of homologous chromosomes in each cell. You will see that, since genes are carried on chromosomes, the patterns of inheritance are determined by the behavior of chromosomes during mitosis and fertilization.

The Law of Independent Assortment — Inheritance of Genes on Different Chromosomes

In this activity, we will only consider one gene on each chromosome. These genes are described in the following table.

	Dominant Alleles	Recessive Alleles
Chromosome 1	W = long wings	w = no wings
Chromosome 2	H = big horns	h = small horns

The mother dragon is heterozygous for the wing gene (Ww) and the horn gene (Hh). The father is homozygous recessive for the wing gene (ww) and the horn gene (hh). What phenotypic traits will each parent have? (If homozygous traits are the observable bodily characteristics.) Draw the appropriate characteristics for each parent.

Mother

Father

Review of Inheritance of Single Genes

Draw a Punnett Square to show the inheritance of the horn alleles for a mating between the mother and father.

On average, what fraction of the baby dragons will have big horns?

¹ Genes for recessive traits are sometimes referred to as "silent" genes. A mutation could occur and change a "silent" gene to being "noisy" (expressing some trait), and this change is called a mutation. For more information, visit <https://www.khanacademy.org/a/what-is-a-mutation>.

Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners Cheryll M.

Adams, Alicia Cotabish, Debbie Dailey, 2021-09-23 A Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners provides teachers and administrators with practical examples of ways to build comprehensive coherent and rigorous science learning experiences for gifted and advanced students from kindergarten to high school. It provides an array of examples across the four domains of science: physical sciences, Earth and space sciences, life sciences, and engineering technology and applications of science. Each learning experience indicates the performance expectation addressed and includes a sequence of activities, implementation examples, connections to the CCSS Math and CCSS ELA, and formative assessments. Chapters on specific instructional and management strategies, assessment, and professional development suggestions for implementing the standards within the classroom will be helpful for both teachers and administrators.

Sunshine in the Dragon's Heart Jaime Samms, 2018-12-04 When Sunny retires to the northern Ontario wilderness to mourn his parents' deaths, he is hoping the change of scenery will afford him some peace and quiet. His hopes are soon spectacularly dashed. In self-imposed exile, dragon Emile runs across the Fold between his dimension and Sunny's and right into Sunny's arms. Centuries out of touch with human culture, bright, beautiful Emile incinerates any hope Sunny had for an ordinary existence. With dryads and water sprites coming to life all around them, Sunny can't deny the magic Emile brings to his life or his heart. But that same magic leads the unrelenting dragon who would keep Emile captive right to them. To save his love, Sunny will have to reach deep and find some magic of his own.

Life's Vital Link Y. W. Loke, 2013-05-23 The development of the placenta was a pivotal event in evolution. Without it, we would still be laying eggs instead of giving birth to live offspring. It represents the critical link between the foetus and the mother, but its character is extraordinary; it is, in effect, a foreign tissue that invades the mother's body. Compared to many other animals, the human placenta represents a particularly aggressive body. But how is it managed and controlled? How did such an organ evolve in the first place? And why is it tolerated by the mother? Y. W. Loke explores the nature of the placenta and what it can tell us about evolution, development, and genetics.

The Answer to Nearly Everything Peter Franklin, 2012-02 The only information we have on Atlantis is from a very ancient Egyptian account that describes it as bigger than all their neighbours combined. Why is this fact ignored by most of the fanciful theories? From Atlantis to our current scientific predictions, the truth about so many things becomes clear and obvious only if all the facts are collected and examined, yet many people just select those that agree with their thinking. The resulting conflict between experience and belief, truth and distortion, or good and bad is only resolved when science, philosophy, and theology are harmonized and examined as aspects of one universal truth.

[International Conference of the Learning Sciences](#) Barry J. Fishman, Samuel F. O'Connor-Divelbiss, 2013-04-15 The field of the learning sciences is concerned with educational research from the dual perspectives of human cognition and computing technologies.
