Göransson, 2021-02-18 The theory of evolution is considered the unifying theory of biology An accurate understanding of evolution is vital both for the understanding of diverse topics in biology but also for societal issues such as antibiotic

resistance or biodiversity In contrast decades of research in science education have revealed that students have difficulties to accurately understand evolutionary processes such as mutation and natural selection The majority of this research relies on a conceptual framework of so called key concepts variation selection inheritance derived from scholarly descriptions of natural selection Recent research suggests that non domain specific concepts such as randomness probability spatial and temporal scales so called threshold concepts are important for evolution understanding in addition to the key concepts Thus many important elements of evolutionary theory are counter intuitive or lie outside direct perception Hence representations such as visualizations models and simulations are considered to be important for teaching and learning evolution While the importance of visualizations is generally acknowledged for science education less is known about how visual design can facilitate students understanding of threshold concepts such as random mutations or spatial scales This thesis uses the Model of Educational Reconstruction MER as the guiding framework for exploring the significance of threshold concepts by analysing the conceptual content of students explanations and extant visualizations of natural selection MER combines scientific content with teaching and learning perspectives for the analysis and design of learning environments Content analysis of visualizations available online showed that most fail to fully represent the basic principles of natural selection variation selection and inheritance Moreover the representational potential of visualizations was seldom used to represent threshold concepts such as randomness in origin of variation Visualizations were also biased to animals as the context of evolution Similarly upper secondary and tertiary students explanations of natural selection were seldom complete in terms of the basic principles and threshold concepts such as randomness were often lacking Especially significant was the almost complete lack of randomness in upper secondary students explanations In addition threshold concepts were context sensitive across the items used bacteria cheetah and salamander for example spatial scale and randomness was significantly more common in responses to the bacteria item compared to the cheetah and salamander items Considering the results from these studies three interactive visualizations were developed evolution of antibiotic resistance and fur colouration in mice The visualization design was conducted iteratively following a Design Based Research approach and evaluated in classroom settings in secondary and upper secondary Swedish schools The results showed that visualizations targeting randomness and genetic level events such as mutations can guide students towards a more scientific conception of natural selection However there were differences across the visualizations and student samples In addition while students often inferred randomness from the visuals the results showed that integration of randomness into explanations of natural selection may be challenging Hence future research should explore the role of guidance and reflection for students understanding of randomness The thesis also discusses the role of students intuitive conceptions in relation to the use of interactive visualizations and how these preconceptions interact with the presented message By using the theory of frame semantics framing effects and conceptual integration students issues of achieving an accurate understanding of evolution are discussed in relation to the

theory of conceptual change Implications for teaching and learning natural selection as well as visualization design for learning are also discussed Evolutionsteorin f rs ofta fram som biologins f renande teori Vikten av en korrekt och anv ndbar evolutionsf rst else har d rf r ofta betonats inte minst f r elever f rst else inom biologins olika delomr den men ocks f r att fatta beslut i samh llsfr gor som exempelvis antibiotikaresistens M nga av de centrala delarna av evolutionsteorin r kontraintuitiva eller abstrakta och decennier av forskning har visat att elever har sv righeter att f rst evolution ra processer som mutation och naturligt urval Representationer s som visualiseringar modeller och simuleringar r d rf r viktiga f r att ge elever direkta erfarenheter av evolution ra processer ven om vikten av visualiseringar r allm nt accepterad inom naturvetenskapsundervisning s r det mindre k nt hur visualiseringars utformning specifikt bidrar till att utveckla elever f rst else av vetenskapliga fenomen s som evolution Dessutom har forskningen p elever f rst else till stor del fokuserat p s kallade nyckelbegrepp variation selektion och arv som h rletts fr n vetenskapliga beskrivningar av evolutionsteorin Dessa begrepp antas vara n dv ndiga men ocks tillr ckliga f r elever f rst else Dock har vikten av icke dom nspecifika begrepp kopplade till evolutionsteorin s som slump sannolikhet spatial och temporala skalor s kallade tr skelbegrepp inte unders kts i n gon h gre grad Den h r avhandlingen anv nder Model of Educational Reconstruction f r att utforska betydelsen av tr skelbegrepp f r evolutionsf rst else Med utg ngspunkt i den vetenskapliga beskrivningen och historiken unders ks f rekosten av tr skelbegrepp i befintliga visualiseringar f r l rande samt elever f rklaringar f r att formulera designprinciper f r interaktiva visualiseringar av evolution Dessutom beskrivs utvecklingen av ett antal interaktiva visualiseringar samt unders kningar av deras potentiella anv ndning i klassrumsmilj er Avhandlingen diskuterar ven betydelsen av elever intuitiva f rest llingar i relation till anv ndandet av interaktiva visualiseringar och hur dessa f rest llingar interagerar med det presenterade budskapet Genom anv ndning av ramsemantisk teori inklusive framingeffekter och blendteori diskuteras elever sv righeter och utveckling av en vetenskaplig evolutionsf rst else i relation till tidigare teorier om begreppsfr ndring Konsekvenser av ramsemantisk teori och framingeffekter i visuella medier diskuteras ven i relation till visuell design f r l rande **HBJ Science** ,1985 Discover Science: Teacher's annotated edition ,1991 Science content helps develop the skills needed to understand how science works learn new concepts solve problems and make decisions in today s technological society **Managing the Adolescent Classroom** Glenda Beamon Crawford,2004-04-29 Uncover the secrets of teachers who are recognized as outstanding classroom managers Through fourteen case studies of exemplary teachers Crawford showcases adolescent classroom management at its best Teachers can draw from this rich store of individual tips secrets and procedures and adapt these management solutions immediately Along with these variations on classic elements of success Crawford also provides many new entry points for new and experienced teachers to improve their own management Reflective chapter questions and discussion prompts make this a productive resource for study groups and mentors as well as classroom teachers Managing the Adolescent Classroom demonstrates how to triangulate great
