

About the book

Introduction to econometrics is designed for a first course in undergraduate econometrics. It differs from other textbooks in three main ways. First, it integrates real-world questions and data into the development of the theory. Second, choice of topics reflects modern theory and practice. Third, theory and assumptions that are provided match the applications. Aim of this text is to teach students to become sophisticated consumers of econometrics and to do so at a level of mathematics appropriate for an introductory course. The updated third edition of Introduction to Econometrics, maintains a focus on currency, while building on the philosophy that applications should drive the theory, not the other way around. The book covers the following topics in detail, Part I. Introduction and Review, 1. Economic Questions and Data, Review of Probability, Review of Statistics, Part II. Fundamentals of Regression Analysis, 4. Linear Regression with One Regressor, 5. Regression with a Single Regressor. Hypothesis Tests and Confidence Intervals, 6. Linear Regression with Multiple Regressors, 7. Hypothesis Tests and Confidence Intervals in Multiple Regression, 8. Nonlinear Regression Functions, and 9. Assessing Studies Based on Multiple Regression.

The Effects of Government Stock on Investment Activity in BRICS Countries Maggie Kgomo, Thobeka Ncanywa, 2019-12-15 Brazil Russia India China and South Africa BRICS are distinguished as having the fast growing markets in the universe compared to other markets of emerging economies according to their promising economic prospective and demographic power This study investigated the effects of government stock on investment activity in BRICS countries This study used panel autoregressive distributed lag model PARDL Engel Granger causality test impulse response functions IRF and variance decomposition tests Such techniques were applied to the annual data for the periods 2001 to 2016 in order to determine the effects of government stock on investment activity The PARDL showed that in the long run investment activity was positively influenced by government stock on mutual banks and government stock on liquid assets and negatively related to government stock on bonds and government stock on corporations The Engel Granger causality test revealed existence of unidirectional movement between investment activity and government stock on corporations as well as

from government stock on bonds to liquid assets The impulse response functions showed the impulse percentage of fluctuation that the variables did contribute to each other from various periods both in the short and long run While the variance decomposition of investment indicated that investment was mainly shocked by its own innovations throughout all the periods A critical evaluation is needed to avoid investment shocks instability of investment activity instability of financial markets and the economy as a whole **International Journal of Applied Business and Economic Research** ,2007
