

## Empire Tadao Invert Mini Board Instructions

Updated 1/2008

### Features

- Fully functional in the Empire Invert Mini
- Based on the Microchip 7 software
- New model microcontroller runs at 8 MHz for no hardware lag and the fastest code execution
- Enhanced power switching hardware for the submini
- Includes 12 fire modes: uncapped semi-auto, capped semi-auto, PSP semi-response, PSP 50% ramping, PSP 100% ramping, PSP burst, NSL full-automatic, auto-response, 50% ramping, 100% ramping, 3 round burst, and full-automatic
- Asynchronously monitors the trigger switch, using an interrupt based scan at 2 million times per second
- 6 mode setting allows 3 different options for every fire mode, giving 18 different "beatsome" style modes
- Adjustable AHB programming prevents fire rate drop-off
- AHB (anti-mechanical bounce) and CPU cycle percentage filter algorithms help to eliminate mechanical bounce and switch bounce
- Proves efficient software and hardware throughout history life
- Programming mode allows changes to defences, dwell, loader delay, AHB, ABO dwell, fire mode, fire mode max rate of fire, eye mode, CPU ramp start, G mode, lock delay, and training mode dwell
- All settings are stored in non-volatile memory so they are not lost when battery is disconnected
- One touch startup enables the marker to fire instantly
- Automatic 15-second idle power down saves battery
- 4 eye modes: delayed, forward with flow shot, hot mode with rate of fire indicator, and reduced dwell training mode with rate of fire indicator
- Low battery indicator hardware and software shows battery level each time the marker is turned on

### LED Indicator

The multi-color LED that shows out the rear of the fire grip shows which mode of operation the marker is currently in:

Rapid Blinking Red	At startup this indicates an exhausted battery
Rapid Blinking Yellow	At startup this indicates a low battery
Rapid Blinking Green	At startup this indicates a good battery
Solid Blue	Ball in breach, ready to fire
Slow Blinking Blue	No ball in breach
Slow Blinking Yellow	Eye malfunction, max rate of fire reduced to 12 bps; alarm eyes or make sure the gun is fired with paint and air
Slow Blinking Red	Eye disabled, rate of fire limited to 20 balls per second in mode 1; otherwise capped at fire mode max rate of fire for mode 2 through 12

### Power Operation

Pressing and releasing the power button turns the marker on. The battery indicator will show the current power level of your battery with a flashing red, yellow, or green LED. After it will show a solid or blinking blue. To turn off, press and hold the power button for 1.5 seconds, until the LED turns off, then release. Every time the marker is turned on, the eyes are enabled. The marker can be turned off regardless of the state of the eyes.

### Eye Operation and Logic

The eyes are enabled when the marker is first turned on. The eyes can be toggled by using the power button. Press and release the power button quickly and the LED will change colors to indicate the mode change.

If used, the eye system cycles the marker as fast as possible. During each shot the eyes watch for the ball to return, ending the current firing cycle and starting another as quickly as the parameters allow. If the eye system is continuously blocked (e.g. putting your finger in front of the eyes) and is unable to see the ball return after every shot, the max rate of fire will be reduced to about 12 balls per second to

prevent further stopping, and the LED will blink yellow to indicate an eye malfunction. Firing the marker with paint and air will utilize the eye system correctly, maintaining the rate of fire. When the eyes are off, the rate of fire is limited to 20 balls per second unless in fire mode 1-12, in which case the rate of fire is selected by the user.

To determine if the eyes are working correctly, insert an object into the breach. Check to see if the LED changes from blinking blue to solid blue and then back to blinking blue once the object is removed.

### Battery Indicator

Battery indicator software and hardware are standard on the Empire Tadao Invert Mini board. When the marker is turned on, the LED will briefly flicker red, yellow, or green to indicate the status of your battery. If a Diskern red, the battery is exhausted and should be changed as soon as possible. If it flickers yellow, the battery may last for another case of paint, but it is close to failing.

### Programming

The tournament lock must be disabled in order to change settings on the board. Pushing the small switch to the left of the battery terminals toggles the tournament lock. While the marker is turned off, push and hold the lock button. The LED will flash red or green to indicate the status of the lock. Red means the lock is on, while green means the lock is off. When the lock and the marker are off, pull and hold the trigger, then push the power button. The marker will turn into programming mode, showing a rainbow sequence before stopping at solid green.

Pressing and releasing the trigger quickly will toggle between the different programming modes:

Green	Defence
Purple	Ball forward dwell
Yellow	Loader delay
Blue	AHB (anti-mechanical bounce)
Red	ABO dwell
White	Fire mode
Teal	Fire mode max rate of fire
Flashing Green	Eye mode
Flashing Purple	CPU cycle percentage filter
Flashing Yellow	Ramp start
Flashing Blue	G mode
Flashing Red	Ball delay
Flashing White	Training mode dwell
Flashing Teal	Window loader dwell
Alternating Blue/Green	Ball return dwell

When the LED is lit for the desired setting, press and hold the trigger until the LED goes out. When you release the trigger, the LED will blink to show the current setting. For example, if the current setting for defence is 5, the LED will blink green 5 times. Over the LED stops blinking, you have 2 seconds to begin rotating the new setting. To enter the new setting, pull the trigger the desired number of times. For example, to set the defence to 2, you must pull the trigger 2 times. Every time you pull the trigger the LED will light. After all settings have been changed, turn the marker off, using the power button.

### Programming Example

If you want to set the ball forward dwell to 12, you should:

1. Make sure the marker is powered off and the tournament lock is disabled.
2. Pull the trigger and push the power button to turn on the marker.
3. The LED shows a rainbow sequence then stops on solid green. This is the defence mode.
4. Quickly pull and release the trigger 1 time to switch to the Ball Forward dwell setting. The LED will show purple.
5. Pull and hold the trigger until the LED turns off.
6. Release the trigger. The LED will blink out the current setting.
7. When the LED stops blinking, enter the new setting by pulling the trigger 12 times.
8. Wait until the LED turns back on, indicating programming has been completed.
9. Turn the marker off.

### Program Reset

To reset all settings to factory defaults, hold down the lock button for 30 seconds while in programming mode. The LED will rapidly cycle through every setting color to indicate that the process has completed.
