A Lifecourse Perspective on Polycystic Ovary Syndrome (PCOS): Bridging Gaps in Research and Practice Mahnaz Bahri Khomami,Bassel H. Al Wattar,Chau Thien Tay ,Anagha Joshi,2026-02-24 Polycystic Ovary Syndrome PCOS stands as the most prevalent endocrinopathy affecting women globally with an estimated 116 million women impacted worldwide Despite its multisystemic health complications spanning reproductive metabolic and psychological aspects research efforts often narrowly focus on reproductive health alone inadvertently neglecting the comprehensive spectrum of this multifaceted condition Additionally it is imperative to recognise PCOS as a lifelong condition which exerts health ramifications from childhood through postmenopausal stages Recent investigations have shed light on the intricate interplay of genetic and epigenetic factors influencing PCOS pathogenesis beginning from in utero and continuing throughout a woman s lifespan This underscores the compelling necessity for a life course perspective in both PCOS research and clinical management Yet a notable gap persists within the research landscape as studies predominantly focus on women of reproductive age thereby overlooking pivotal phases in the natural progression of PCOS including reproductive years and post menopausal stages The 2023 PCOS Guideline has prioritised future research across diverse subgroups within the PCOS population spanning various age groups ethnicities and other demographic factors This special issue seeks to consolidate research findings across diverse

populations and age groups encompassing the life course of women affected by PCOS Through the adoption of a life course perspective this initiative aspires to furnish a comprehensive understanding of PCOS from its prenatal origins to its implications in postmenopausal years thereby advancing scholarly discourse and clinical practice in this field
