makes a case against survey research as a primary source of reliable information George Beam argues that all survey  
research instruments all types of asking including polls face to face interviews and focus groups produce unreliable and  
potentially inaccurate results Because those who rely on survey research only see answers to questions it is impossible for  
them or anyone else to evaluate the results They cannot know if the answers correspond to respondents actual behaviors  
objective phenomena or to their true beliefs and opinions subjective phenomena Reliable information can only be acquired by  
observation experimentation multiple sources of data formal model building and testing document analysis and comparison  
In fifteen chapters divided into six parts Ubiquity of Survey Research The Problem Asking Instruments Asking Settings  
Askers and Proper Methods and Research Designs The Problem with Survey Research demonstrates how asking instruments  
settings in which asking and answering take place and survey researchers themselves skew results and thereby make  
answers unreliable The last two chapters and appendices examine observation other methods of data collection and research  
designs that may produce accurate or correct information and shows how reliance on survey research can be overcome and
