DESCRIPTION

The Fire Control Instruments 7200 Series Analog/FCINET[®]/Hardwire Fire Alarm Control is multiprocessor-based and designed for commercial, industrial, proprietary, central station and institutional applications. The 7200 Series may be configured as an analog/addressable, point identified system where individual identification of initiating devices and control points are required, a conventional hard-wired, zone-identified system, or combination of both. It meets the requirements of NFPA Standard 72, and is suitable for releasing device service.

The 7200 Series is field programmable to perform a wide variety of functions. Inherently power limited, it can accommodate 15 units of one type with a maximum total combination of 30 units. Units are available in a wide range of configurations.

Designed around multiprocessors that provide and control all system functions, the 7200 Series has a powerful software structure that affords true "distributed processing" of all system components. The system can accommodate module placement at either a central location, or up to fifteen (15) remote locations via the FCINET[®] communications to provide multiplex system features.

The FCI Listed Integrated Sensitivity Testing (LIST) program meets all NFPA 72 requirements for testing and monitoring of sensor sensitivity.

The 7200 Series control has been tested for extraordinary ambient conditions with 6,000 volt transient immunity circuits.
