

Environmental Science – Chapter 11

Soil: The Foundation of Land Ecosystems

What caused the dust bowl?
 Homestead Act 1862
 Drought beginning in 1931

Erosion – A certain amount of erosion is natural
 Wave-cut platform caused by erosion of cliffs by the sea, Southern down, South Wales

Desertification: Permanent reduction of the productivity of arid, semiarid, and seasonally dry areas (traditionally called drylands)

What is soil?

Mineral component derived from weathering of rocks or deposition of sediments
 Sand, silt, clay

Proportions of sand, silt, and clay determine texture

Loess: aeolian sediment formed by accumulation of wind-blown silt

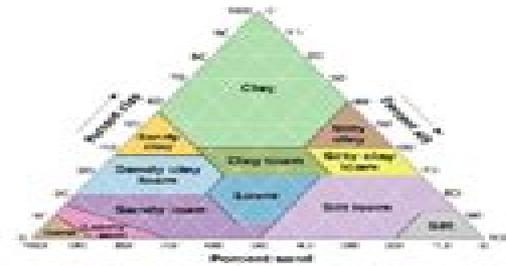

Why are silt and loam the best textures?
 Soil profiles: take into account both inorganic (mineral) and organic components of soil

Humus = "mature compost"
 Topsoil accumulates at no more than 1 inch per century
 E = eluviation

Hydric soils:
 Not a true soil class – instead, a legal definition
 Hydric soils are wetland soils that develop anaerobic conditions when flooded.
 Under anaerobic conditions, organic matter decomposes very slowly.

Most essential nutrients supplied by slow decomposition of organic matter
 Leaching and nutrient-holding capacity
 Fertilizers

fast release and slow release
 inorganic fertilizers much more prone to leaching
 Soils with organic matter that decays slowly are more fertile.
