Microsoft Project 20guide:

Easy Web Page Creation Mary Millhollon, Jeff Castrina, 2001 Easy Web Page Creation is the ideal Web creation guide for people who want to build their own home pages but don't know where to start. The book proves that armed with key facts about Web page mechanics and design concepts, people with average computer skills can skillfully build a professional-looking Web page with the resources they already have on hand, such as Microsoft RM Office 2000. It shows readers with basic computer skills but no prior publishing or design experience how to create a variety of Web pages, from simple online community pages on MSN RM to full-blown multimedia sites using Microsoft FrontPage RM. It also demonstrates how to plan, upload, and maintain a Web site, and it presents a wealth of tips and advice about good Web design practices. With Easy Web Page Creation, Web site success is within easy reach of anyone, from grandparents to Generation Xers, and any organization, from hobby groups to government offices and small businesses to established enterprises.

Graphical User Interface

Design and Evaluation (guide) David Redmond-Pyle, Alan Moore, 1995 Describes a design process that contains techniques such as usability, requirement specification, task modelling, object modelling, style guide definition, GUI design, prototyping, and valuation, integrated together into a coherent framework. This is intended for professional software developers. **Four**

Battlegrounds Paul Scharre, 2023-02-28 An NPR 2023 Books We Love Pick One of the Next Big Idea Club's Must Read Books. An invaluable primer to arguably the most important driver of change for our future. P. W. Singer, author of *Burn In*. An award-winning defense expert tells the story of today's great power rivalry: the struggle to control artificial intelligence. A new industrial revolution has begun. Like mechanization or electricity before it, artificial intelligence will touch every aspect of our lives and cause profound disruptions in the balance of global power, especially among the AI superpowers: China, the United States, and Europe. Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game-changing technology and dominate the future. *Four Battlegrounds* argues that four key elements define this struggle: data, computing power, talent, and institutions. Data is a vital resource like coal or oil, but it must be collected and refined. Advanced computer chips are the essence of computing power; control over chip supply chains grants leverage over rivals. Talent is about people; which country attracts the best researchers and most advanced technology companies? The fourth battlefield is, maybe, the most critical: the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy, society, and especially their military. Scharre's account surges with futuristic technology. He explores the ways AI systems are already discovering new strategies via millions of war game simulations, developing combat tactics better than any human, tracking billions of people using biometrics, and subtly controlling information with secret algorithms. He visits China's National Team of leading AI companies to show the chilling synergy between China's government, private sector, and surveillance state. He interviews Pentagon leadership and tours U.S. Defense Department offices in Silicon Valley, revealing deep tensions between the military and tech giants who control data, chips, and talent. Yet he concludes that those

tensions inherent to our democratic system create resilience and resistance to autocracy in the face of overwhelmingly powerful technology Engaging and direct Four Battlegrounds offers a vivid picture of how AI is transforming warfare global security and the future of human freedom and what it will take for democracies to remain at the forefront of the world order

Managing Digital Records in Africa Mpho Ngoepe,2022-05-23 Managing Digital Records in Africa draws on the research work of the InterPARES Trust ITrust project that investigated interrelated archival issues focusing on legal analysis infrastructure trust authentication and education within the African context This research focused book provides a legal analysis and systematic assessment of how African institutions manage digital records in four countries i e Botswana Kenya South Africa and Zimbabwe It also examines the extent to which records are managed using Internet based applications trust in such records and digital record authentication to support the auditing process Finally it provides a curriculum analysis in digital records at institutions of higher learning in 38 African countries The book s case studies illustrate the threads of discussion which span the ITrust domains of legislation infrastructure authentication trust and education in archives and records management The book can be used as a premier reference source by private and public organizations researchers educators archivists records managers and postgraduate students to make informed decisions about digital records records management systems cloud based services authenticating records and identifying universities on the continent that offer archival programmes The book may also find expression to practitioners in other fields such as law and auditing *Guide to Documents and Manuscripts in the United Kingdom Relating to Russia and the Soviet Union* Janet M. Hartley,1987 **The Engineer** ,2013 Presents professional information designed to keep Army engineers informed of current and emerging developments within their areas of expertise for the purpose of enhancing their professional development Articles cover engineer training doctrine operations strategy equipment history and other areas of interest to the engineering community
