Correction of Systematic Errors in Piezoelectric Cutting Force Measurement Simon Rekers,2019-08-30 Systematic measurement errors in piezoelectric cutting force measurements are researched within this thesis The errors originate from the seismic mass which is mounted upon the transducer On the one hand the seismic mass reduces the bandwidth of the measurement system On the other hand the seismic mass leads to superimposed inertial forces when the seismic mass is subjected to motion during cutting force measurement Both effects are modelled and correction methods were researched which are capable to correct these systematic measurement errors in hard real time

Machining Dynamics Tony L. Schmitz,K. Scott Smith,2008-11-27 Machining dynamics Frequency response to improved productivity will train engineers and students in the practical application of machining dynamics with a particular focus on milling The book is arranged such that the steps required to improve machining productivity through chatter avoidance and reduced surface location error forced vibrations resulting in part geometric errors are clearly evident The following topics are covered in detail modal analysis including experimental methods to obtain the tool point frequency response function descriptions of turning and milling including force modeling time domain simulation stability lobe diagram algorithms and surface location error calculation for milling and receptance coupling methods for tool point frequency response prediction including beam theory Numerical examples are included as well as the MATLAB code used to develop the figures
