Exploring Death Berta Morell-Rovira,F. Xavier Oms, Gerard Remolins, Juan F. Gibaja,2025-09-30 Explores the funerary practices of Neolithic communities in the northeastern Iberian Peninsula shedding light on social networks and burial traditions Since the dawn of archaeology the study of funerary contexts has provided invaluable insights into past societies a

trend that persists in contemporary research Ongoing discoveries site re evaluations and advancements in techniques like DNA analysis continually reshape our understanding of the past In the specific contexts we are addressing the emergence of the first farming and herding communities in the Western Mediterranean few regions in Europe display such systematic funerary practices A notable example is the Sepulcros de Fosa horizon in the northeastern Iberian Peninsula Approximately 6 500 years ago in this area there was a significant increase in the number of found inhumations with some clustering in cemeteries containing several dozen individuals Despite sporadic mentions in international publications the details of the Sepulcros de Fosa horizon funerary practices such as burial locations characteristics and performed analysis are generally not well known primarily because most of the publications have been presented in Catalan or Spanish This limits awareness of one of the best documented archaeological records shedding light on Neolithic communities in the Western Mediterranean Over a century the northeastern Iberian Peninsula has yielded numerous Neolithic burials totalling over 896 graves predominantly featuring single inhumations Many of these graves excavated in ground pits remain remarkably intact facilitating interpretations of burial treatments and grave goods indicative of time and effort invested in acquisition and production Furthermore this was also a period of well established social networks allowing the distribution of materials such as flint obsidian or jadeite for crafting lithic tools and variscite for producing ornaments across extensive territories spanning hundreds of kilometres These networks had an impact on the social economic and ideological organization of these communities as well as their interactions with other European populations This interconnected world left archaeological traces evident in the early stages of subsequent megalithic developments
