

Empire Tadao Invert Mini Board Instructions

Updated 2/2008

Features

- Fully functional in the Empire Invert Mini
- Based on the Mega64 T sub-board
- New model microcontroller runs at 8 MHz for an hardware lag and the fastest code execution
- Enhanced primary switching hardware for the red/white
- Includes 1:1 fire modes, swapped automatic, capped automatic, PSP auto-response, PSP 50% ramping, PSP 100% ramping, PSP burst, N:2, full-automatic, auto-response, 50% ramping, 100% ramping, 7 model/burst, and full-automatic
- Automatically maintains the trigger status, using an interrupt based scan at 2 million times per second
- Q mode setting allows 7 different options for every fire mode, giving 94 different "breakout" style modes
- Adjustable ABS programming prevents fast start/stop-off
- ABS lock mechanism (brake) and CPU cycle percentage filter algorithms help to eliminate mechanical bounce and contact bounce
- Power efficient software and hardware lengthens battery life
- Programming mode allows changes to deflection, dwell, loader delay, ABS, ABS dwell, fire mode, fire mode max rate of fire, eye mode, CPS, ramp-start, Q mode, hold delay, and training mode dwell
- All settings are stored in non-volatile memory so they are not lost when battery is disconnected
- One-touch startup enables the marker to fire instantly
- Automatic 15-minute idle power down-saves batteries
- 4 eye modes: delayed, forced with force shot, test mode with rate of fire indicator, and reduced-dwell training mode with rate of fire indicator
- Low battery indicator hardware and software shows battery level each time the marker is turned on

LED Indicator

The multi-color LED that sits on the rear of the fire grip shows which mode of operation the marker is currently in:

Rapid Blinking Red	At startup this indicates an exhausted battery
Rapid Blinking Yellow	At startup this indicates a low battery
Rapid Blinking Green	At startup this indicates a good battery
Solid Blue	Ball in broach, ready to fire
Slow Blinking Blue	No ball in broach
Slow Blinking Yellow	Eye malfunctions, max rate of fire reduced to 12 Hz; often eye or marker rate the gun is fired with gun and off
Slow Blinking Red	Eye disabled, rate of fire limited to 20 balls per second or mode 1; otherwise capped at fire mode max rate of fire for fire modes 2 through 12

Power Operation

Pressing and releasing the power button turns the marker on. The battery indicator will show the current power level of your battery with a flashing red, yellow, or green LED. After, it will show a solid or blinking blue. To turn off, press and hold the power button for 1.5 seconds, until the LED turns off, then releases. Every time the marker is turned on, the eyes are enabled. The marker can be turned off regardless of the state of the eyes.

Eye Operation and Logic

The eyes are enabled when the marker is first turned on. The eyes can be toggled by using the power button. Press and release the power button quickly and the LED will change colors to indicate the mode change.

If solid, the eye system cycles the marker as fast as possible. Starting each shot the eye waits for the ball to center, ending the current firing cycle and starting another as quickly as the pneumatic allows. If the eye system is continuously disabled (supporting your finger in front of the eyes) and is unable to see the ball center after every shot, the max rate of fire will be reduced to about 12 balls per second or

prevent further charging, and the LED will blink yellow to indicate an eye malfunction. Firing the marker with gun and air will utilize the eye system correctly, maintaining the rate of fire. When the eyes are off, the rate of fire is limited to 20 balls per second unless in fire mode 2-12, in which case the rate of fire is automatically 80-90.

To determine if the eyes are working correctly, insert an object into the broach. Check to see if the LED changes from blinking blue to solid blue and then back to blinking blue once the object is removed.

Battery Indicator

Battery indicator software and hardware are standard on the Empire Tadao Invert Mini board. When the marker is turned on, the LED will briefly flash red, yellow, or green to indicate the status of your battery. If it flashes red, the battery is exhausted and should be changed as soon as possible. If it flashes yellow, the battery may last for another case of paint, but it is close to failing.

Programming

The tournament lock must be disabled in order to change settings on the board. Pushing the small switch to the left of the battery terminals toggles the tournament lock. While the marker is turned off, push and hold the lock button. The LED will flash red and green to indicate the status of the lock. Red means the lock is on, while green means the lock is off. When the lock and the marker are off, pull and hold the trigger, then push the power button. The marker will boot into programming mode, showing a random sequence before stopping at solid green.

Pushing and releasing the trigger quickly will toggle between the different programming modes:

Green	Defaulted
Purple	Ball forward dwell
Yellow	Loader delay
Blue	ABS (anti-mechanical bounce)
Red	ABS dwell
White	Fire mode
Red	Fire mode max rate of fire
Flashing Green	Eye mode
Flashing Purple	CPU cycle percentage filter
Flashing Yellow	Battery meter
Flashing Blue	Q mode
Flashing Red	Ball delay
Flashing White	Training mode dwell
Flashing Teal	Window loader dwell
Flashing Blue/Green	Ball return dwell

When the LED is in for the desired setting, press and hold the trigger until the LED goes out. When you release the trigger, the LED will blink to show the current setting. For example, if the current setting for deflection is 5, the LED will blink green 5 times. Once the LED stops blinking, you have 2 seconds to begin entering the new setting. To enter the new setting, pull the trigger the desired number of times. For example, to set the deflection to 2, you must pull the trigger 2 times. Every time you pull the trigger the LED will light. After all settings have been changed, turn the marker off, using the power button.

Programming Example

- If you want to set the ball forward dwell to 12, you should:
- Make sure the marker is powered off and the tournament lock is disabled
 - Pull the trigger and push the power button to turn on the marker
 - The LED shows a random response then stops on solid green. This is the deflection mode.
 - Quickly pull and release the trigger 5 times to switch to the ball forward dwell setting.
 - The LED will show purple.
 - Pull and hold the trigger until the LED turns off.
 - Release the trigger. The LED will blink out the current setting.
 - When the LED stops blinking, enter the new setting by pulling the trigger 12 times.
 - Wait until the LED turns back on, indicating programming has been completed.
 - Turn the marker off.

Program Reset

To reset all settings to factory defaults, hold down the lock button for 30 seconds while in programming mode. The LED will rapidly cycle through every setting color to indicate that the process has completed.

Invert Mini Board Manual

**Richard A. Eckhardt, Matthew F.
Kubitsky, Robert C. Molloy**

Invert Mini Board Manual:

Reviewing **Invert Mini Board Manual**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is really astonishing. Within the pages of "**Invert Mini Board Manual**," an enthralling opus penned by a very acclaimed wordsmith, readers set about an immersive expedition to unravel the intricate significance of language and its indelible imprint on our lives. Throughout this assessment, we shall delve to the book is central motifs, appraise its distinctive narrative style, and gauge its overarching influence on the minds of its readers.
