Urban Architecture

Thomas Schröpfer,2012-12-13 The goal of advancing eco cities often remains confined to political or

technological issues This book establishes a focus on architectural and infrastructural design approaches to sustainable

urban development Taking as a basis the critical assessment of the five prototypical eco cities of Vauban Freiburg solarCity

Linz Valdespartera Sarriguren Pamplona und Bo01 Malm the book identifies fields in which architectural and urban

designers can use their creative skills and methods to achieve sustainable results on the urban scale The themes of

Materialize Mobilize Simulate and Transform highlight the shift from the manipulation of quantitative variables to interactive

relationships effecting qualitative outcomes in design For example Materialize explores the potential of eco design beyond

the traditional palette of materials to show how spatial boundaries can be re imagined as gradients of conditioned versus

unconditioned space working with climatic conditions rather than material boundaries to help generate new forms of urban

Routledge Handbook of Insect Conservation James S.

Pryke,Michael J. Samways,Tim R. New,Pedro Cardoso,René Gaigher,2024-06-14 This handbook presents a comprehensive

overview of insect conservation and provides practical solutions to counteract insect declines at a time where insects are

facing serious threats across the world from habitat destruction to invasive species and climate change The Routledge

Handbook of Insect Conservation consist of six sections covering all aspects of insect conservation containing contributions

from academics researchers and practitioners from across the globe Section I addresses the fundamentals of insect

conservation and outlines the reason why insects are important and discusses the greatest drivers of insect decline The

chapters in Section II examine the approaches that can be used for insect conservation globally such as protected areas and

agroecology while highlighting the importance of insects in the composition and function of ecosystems The chapters in

Section III focus on insect populations in the major biomes around the world from temperate and tropical forests to savannas

and grasslands with the chapters in Section IV focusing on natural and manmade ecosystems of the world including mountain

soil urban island and agricultural habitats They discuss the unique pressures and challenges for each biome and ecosystem and offer practical solutions for conserving their insect populations Section V focuses on the assessment and monitoring of insects for conservation discussing how we can implement practical monitoring protocols and what options are available A wide variety of methods and tools are examined including citizen science bioindication the role of taxonomy drones and eDNA The book concludes by examining policy and education strategies for insect conservation in Section VI The chapters discuss key issues around social and policy strategies and conservation legislation for ensuring the long term protection of insects This book is essential reading for students and scholars of biodiversity conservation and entomology as well as professionals and policymakers involved in conservation looking for real world solutions to the threats facing insects across the globe
