

Gene-Expression Explorers: A WebQuest on Gene Regulation

Introduction

Cells in your body are all built from the same DNA — yet a skin cell is very different from a nerve cell, muscle cell, or liver cell. How does that happen? It's because different genes are "turned on" or "turned off" in different cell types, at different times, or under different conditions. This process is called **regulation of gene expression**. By controlling when, where, and how much a gene is expressed, cells determine which proteins to make — and thus what kind of cell they become or how they behave.

1. Introductory Video

 Use the video on the first website below to get a quick, clear overview of why gene regulation is so important.
