Proceedings of the Nutrition Society ,2003 *Index Veterinarius* ,2006 **Genetic Engineering News** ,2001 *The Age of Genomes* Steven Monroe Lipkin, Jon Luoma, 2016-05-17 A leading geneticist explores what promises to be one of the most transformative advances in health and medicine in history Almost every week another exciting headline appears about new advances in the field of genetics Genetic testing is experiencing the kind of exponential growth once seen with the birth of the Internet while the plummeting cost of DNA sequencing makes it increasingly accessible for individuals and families Steven Lipkin and Jon Luoma posit that today's genomics is like the last century's nuclear physics a powerful tool for good if used correctly but

potentially dangerous nonetheless DNA testing is likely the most exciting advance in a long time for treating serious disease but sequencing errors complex biology and problems properly interpreting genetic data can also cause life threatening misdiagnoses of patients with debilitating and fatal genetic diseases DNA testing can also lead to unnecessary procedures and significantly higher health care costs And just around the corner is the ability to cure genetic diseases using powerful gene editing technologies that are already being used in human embryo research Welcome to the Age of Genomes The Age of Genomes immerses readers in true stories of patients on the frontier of genomic medicine and explores both the transformative potential and risks of genetic technology It will inform anxious parents increasingly bombarded by offers of costly new prenatal testing products and demonstrate how genetic technology when deployed properly can significantly improve the lives of patients who have devastating neurological diseases cancer and other maladies Dr Lipkin explains the science in depth but in terms a layperson can follow
