The cylinder head contact surface should only be machined if there is mechanical damage.

It should not be machined (by fine grinding) of the contact surface of the cylinder head in service (except) in the longitudinal and transverse directions.

When the cylinder head is removed again, surface mapping will be removed and relate the cylinder head both to lightness.

Stock removed from the cylinder head and cylinder cross-section of an engine should together be as much as possible. If the cylinder head contact surface is machined, the latter work must be done.
