

Genetics: Punnett Squares Practice Packet Bio

Most genetic traits have a stronger, dominant allele and a weaker, recessive allele. In an individual with a heterozygous genotype, the dominant allele shows up in the offspring and the recessive allele gets covered up and doesn't show; we call this **complete dominance**.

However, some alleles don't completely dominate others. In fact, some heterozygous genotypes allow both alleles to partially show by blending together how they are expressed; this is called **incomplete dominance**. Other heterozygous genotypes allow both alleles to be completely expressed at the same time like spots or stripes; this is called **codominance**. Examples of each are listed below.

Write what each type would be if they were heterozygous.

1. Complete dominance = If a Red (RR) and White flower (rr) were crossbred, resulting in 100% Rr, what phenotype would be seen according to the rules of COMPLETE dominance?
2. Incomplete dominance = If a Red (RR) and White flower (rr) were crossbred, resulting in 100% Rr, what phenotype(s) would be seen according to the rules of IN-complete dominance?
3. Codominance = If a Red (RR) and White flower (WW) were crossbred, resulting in 100% RW, what phenotype(s) would be seen according to the rules of CO-dominance?

4-6. Snapdragons are incompletely dominant for color; they have phenotypes red, pink, or white. The red flowers are homozygous dominant, the white flowers are homozygous recessive, and the pink flowers are heterozygous. Give the genotypes for each of the phenotypes, using the letters "R" and "r" for alleles:

- a. Red snapdragon genotype: _____ b. Pink snapdragon genotype: _____ c. White snapdragon genotype: _____

Show genetic crosses between the following snapdragon parents, using the punnett squares provided, and record the genotypic and phenotypic %s below:

a. pink x pink

Genotypic %: _____
Phenotypic %: _____

b. red x white

Genotypic %: _____
Phenotypic %: _____

c. pink x white

attractive book alerts us to the existence of evolution based software Genetic Algorithms and Evolution Strategies used for
the study of complex systems and difficult optimization problems unresolved until now Evolution algorithms are artificial
intelligence techniques which mimic nature according to the survival of the fittest Darwin s principle They randomly encode
physical quantitative or qualitative variables via digital DNA inside computers and are known for their robustness to better
explore large search spaces and find near global optima than traditional optimization methods The objectives of this volume
are two fold to present a compendium of state of the art lectures delivered by recognized experts in the field on theoretical
numerical and applied aspects of Genetic Algorithms for the computational treatment of continuous discrete and
combinatorial optimization problems to provide a bridge between Artificial Intelligence and Scientific Computing in order to
increase the performance of evolution programs for solving real life problems Fluid dynamics structure mechanics
electromagnetics automation control resource optimization image processing and economics are the featured multi
disciplinary areas among others in Engineering and Applied Sciences where evolution works impressively well This volume is
aimed at graduate students applied mathematicians computer scientists researchers and engineers who face challenging
