

Lithology Identification

Identifying lithology is an important qualitative application of resistivity and porosity logs, but it can also be one of the most challenging. No logging tool directly measures lithology, but almost every measurement presented on a log (even a caliper!) responds to changes in rock type. Piecing together evidence provided by different measurements can, in many cases, allow for a very conclusive determination of lithology.

Shale shows characteristic resistivity and spontaneous potential (SP) responses. Identifying sandstone may only require a quick glance at the photoelectric factor (P_e) curve on a density log, but other reservoir rocks like limestone and dolomite may require consideration of their porosity responses. Identifying mixed mineralogies (e.g., shaly sandstone) may require consideration of almost every measurement presented.

Quick-look lithology identification is a qualitative process that initially involves P_e values and pattern recognition of porosity responses. Clues provided by other measurements help improve the method's effectiveness. This section introduces the "classic" responses of common lithologies, and lays the foundation for using resistivity and porosity logs to identify them.

Measurements Providing Lithology Indications

Simple is best, but simple can be dangerous. Relying exclusively upon gamma ray and P_e responses can easily provide misleading clues as to a reservoir's lithology. For example, suppose a formation has some "low" gamma ray response and P_e ≈ 5. The rock could be limestone, but it may also be anhydrite. Similarly, a rock with P_e ≈ 3 could be dolomite, but it may be a shaly sandstone or a mixture of sandstone and limestone. Confirmation of lithology requires a cross-check of porosity and other curve responses.

The best process for identifying lithology uses responses from all of the measurements presented on resistivity and porosity logs. In many cases it is a process of elimination. The P_e response may initially indicate more than one possible lithology, but other responses can often be used to narrow

Lithology Identification Guide

M Tight

A decorative graphic element consisting of a light blue horizontal bar with a rounded right end, overlaid on a red-to-white gradient semi-circle.

Lithology Identification Guide:

When people should go to the book stores, search instigation by shop, shelf by shelf, it is in point of fact problematic. This is why we give the ebook compilations in this website. It will unconditionally ease you to see guide **Lithology Identification Guide** as you such as.

By searching the title, publisher, or authors of guide you in point of fact want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best place within net connections. If you objective to download and install the Lithology Identification Guide, it is categorically easy then, before currently we extend the join to purchase and make bargains to download and install Lithology Identification Guide in view of that simple!
