LATEST ENERGY EQUATIONS, NUTRIENT REQUIREMENTS AND FEEDING GUIDELINES OF CATTLE PROF. HUSEYIN NURSOY, 2024-08-27 In this book the equations of energy units of feeds body weight definitions daily dry matter intake equations factors affecting of daily energy requirements heat production of body and its determination methods basal metabolism and respiratory coefficient latest energy equations conversion rates of energy units requirements tables and practical feeding guidelines for cattle This book does not cover the protein mineral vitamin and water requirements of cattle because the most important parameter for life and productivity in living is energy then protein In fact the energy issue is more complex than protein mineral vitamin and water I also focused on energy issue Simpler and latest equations were preferred without overwhelming mathematics Environmental performance of feed additives in livestock supply chains. Guidelines for assessment Food and Agriculture Organization of the United Nations ,2020-09-01 The production and the use of feed additives influence the environmental impact of livestock production The use of feed additives significantly acts on feed efficiency and thus animal and environmental performance The methodology developed in these guidelines aims to introduce a harmonized international approach to the assessment of the environmental performance of feed additives in livestock supply chains taking into consideration the impact of their production and use all along the supply chain for large ruminants pigs and poultry The objective of this technical document is twofold on the one hand to provide detailed guidance on how to measure the environmental performance of the production of feed additives and on the other hand how to measure the effects of feed additives on the environmental performance of livestock products The guidelines on the environmental performance of feed additives in livestock supply chains are intended to be used with other published LEAP guidelines

Water use in livestock production systems and supply chains. Guidelines for assessment Food and Agriculture Organization of the United Nations, 2019-08-14 The Technical Advisory Group TAG for Water Use Assessment composed by 30 international experts has developed guidelines on water footprinting for livestock supply chains The mandate of the Water TAG was to provide recommendations to monitor the environmental performance of feed and livestock supply chains over time so that progress towards improvement targets can be measured apply the guidelines for feed and water demand of small ruminants poultry large ruminants and pig supply chains build on and go beyond the existing FAO LEAP guidelines and pursue alignment with relevant International Organization for Standardization ISO standards specifically ISO 14040 ISO 14044 ISO 2006b and 2006a and ISO 14046 ISO 2014 The guidelines on water use assessment include the impact assessment the assessment of the environmental performance related to water use of a livestock related system by assessing potential environmental impacts of blue water consumption following the water scarcity footprint according to the framework provided by ISO 14046 ISO 2014 and the assessment of the system's productivity of green and blue water The guidelines are thus intended to support the optimization of use of water resources and the identification of opportunities to decrease the

potential impacts of water use in livestock production The Water TAG guidance is relevant for livestock production systems including feed production from croplands and grasslands and production and processing of livestock products cradle to gate It addresses all livestock production systems and livestock species considered in existing LEAP animal guidelines poultry pig small ruminant and large ruminant supply chains Better Utilization of Crop Residues and By-products in Animal Feeding T.
