The IPAT Equation

The IPAT equation is a widely used simplification of the factors causing environmental degradation. The equation is I = P x A x T. This is short for environmental **I**mpact = **P**opulation x **A**ffluence (consumption per person) x **T**echnology (impact per unit of consumption). It's crucial to remember that the three factors are intermediate causes, not root causes.

$$\text{Impact} = \text{Population} \times \frac{\text{consumption}}{\text{per person}} \times \frac{\text{impact}}{\text{per unit of consumption}}$$
