Technical Language

Topic sentence about habitat

The habitat of the southern bent wing bat are limestone caves, lava tunnels, coastal cliff rock crevices and man made tunnels found on the border between southern Victoria and South Australia. They like these environments because they provide warmth and protection for them and their young.

Attention to detail

The diet of the Southern bent wing bat is made up of eating moths and beetles. They catch their food **whilst flying** as beetles and moths are caught on their wings, tail and sometimes directly in their mouth. Amazingly they can detect tiny insects without the sense of sight.

Present tense

Relevant vocabulary

Baby bent wing bats are called pups and are born naked but then soon grow black fur upon their body. The pups will attempt their first flight when they are around four to five weeks old. They are born between October to January in special caves called maternity caves which have the right structure for young pups to be nursed and learn to fly. A Southern bent wing bat will live for approximately twenty years.

Labelled relevant diagram

Some threats to the Southern bent wing bats are flooding of their caves which causes them to lose their food source. **They can also unknowingly eat insects which have been poisoned by humans** and if they are disturbed during hibernation it often results in them dying.
