conversely downtime for High Mobility Multipurpose Wheeled Vehicles HMMWVs The study found that estimated repair costs and downtime increase with vehicle age with the strength of both effects tapering off slightly for older vehicles The study also found that vehicle usage location and variant type have significant effects These estimated cost versus age and downtime versus age relationships were embedded in a vehicle replacement model that given assumptions about the cost and effectiveness of RECAP can be used to estimate the timing recommended for RECAP and replacement of HMMWVs The model results indicate that the Army might be able to achieve modest life cycle cost savings by replacing some HMMWV variants at an age lower than the current average fleet age but the savings from RECAP will depend on the program s costs and its effectiveness in reducing future vehicle maintenance costs and downtime
