

# Cladogram Worksheet

Match the traits to the numbers in the cladogram. Then, answer the questions that follow.

- 9) Which organisms have amniotic eggs?
- 10) Which organisms have amniotic eggs in shells?
- 11) A clade that includes frogs and crocodiles must also include what other animals?
- 12) If all the organisms with four legs form a clade (group), which organisms make up the outgroup?
- 13) Could a worm be part of this cladogram? Why or why not?
- 14) Birds are most closely related to which group of animals?

Draw a cladogram using the information in the chart.

Org. / Trait	Eukaryotic Cells	Bipedal	Backbone	Legs	Hair
Human					
Tiger		-			
Salamander		-			-
Sponge		-	-	-	-
Clown fish		-		-	-

- 15) A clade that includes tigers and salamanders must also include what other animals?

## **Making Cladograms Answer Key:**

*Chapter Resource 14 Class of Organisms Biology Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2004*

Romancing the Birds and Dinosaurs Alan Feduccia, 2020-10-15 Birds and dinosaurs have dominated human interest for decades. In this well-supported revolutionary view of the field, critical questions are explored with credible evidence and biological thought: Are birds derived directly from advanced dinosaurs or are they closely related dinosaur cousins? Did flight originate via the natural gravity-assisted trees-down model or from the improbable gravity-resisted ground-up model? Were the earliest birds ground predators or trunk-climbing gliders? Were dinosaurs hot-blooded with insulating protofeathers or highly active cold-blooded reptiles? These are among the questions addressed in this path-breaking book. Current consensus suggests that early birds were earth-bound and flight began on the ground. Reversing that logic since birds are hot-blooded by inference, so too were dinosaurs, and extraordinarily complex feathers, flight brain, and inner ear evolved before flight in dinosaurs. The iconic early bird *Archaeopteryx*, despite innumerable flight and arboreal features, is now displayed as an earth-bound predator that could not fly. In reality, we have yet to provide satisfactory explanations for much of the biological origin and early evolution of birds. Among the questions addressed is whether truly feathered dinosaurs are in reality lost or hidden birds. The architectural complexity of feathers leads the author to the conclusion that if an animal has evolved extraordinarily complex aerodynamically designed feathers, an avian flight hand, flight membranes, and a flight brain, it's a bird. Birds and dinosaurs captivate and enchant the human imagination. These intriguing animals have dominated the field of paleontology and evolution for the past half-century, engendering heated debate on avian ancestry, the origin of flight and feathers, and the biology of their fossils. Are birds living dinosaurs? In this series of entertainingly contentious and captivating essays, evolutionary biologist Alan Feduccia writes with verve and humor to expose major problems in the field and advocate liberation from the shackles of consensus thinking about birds and dinosaurs. He maintains that the euphoria of paleontologists claiming to have solved the major problems of bird evolution is premature, largely generated by the adoption of a rigid, cult-like methodology heavily blended with ideology and excluding many biological and geological principles. He adroitly exposes and elucidates major mistakes in the field and their aftermath. *Romancing the Birds and Dinosaurs* is a lucid revelation of clarity and synthesis, a fascinating unveiling of the underlying science that has produced the good but also often appalling fossil research and wild speculation in bird and dinosaur evolution. A must-read for anyone interested in this rapidly evolving field, the short, concise, and incisive essays provide the reader with access to this complex topic. **REVIEWS and WORDS OF PRAISE** In this strikingly unconventional and brilliant book, Professor Alan Feduccia presents the current status of the recent controversy about the origin of birds with clarity and vigor. A thought-provoking personal exploration of what the bird fossils represent. Sankar Chatterjee, Paul Whitfield Horn, Distinguished Professor of Geosciences and Curator of Paleontology, Texas Tech University. Feduccia's book eloquently reminds us that consensus science is to be shied away from.

especially when it is used to plead special cases against basic scientific principles The concept of lost birds is particularly intriguing as it defines what birds are and how special science obfuscates the simplicity of evolution David A Burnham Associate Researcher University of Kansas Biodiversity Institute and Natural History Museum Based on a thorough understanding of the empirical evidence Feduccia presents a convincing account of avian origins from their putative ancestors Walter J Bock Professor of Evolutionary Biology Columbia University and Research Associate American Museum of Natural History With candor clear thinking humor and abundant evidence Alan Feduccia s *Romancing the Birds and Dinosaurs* should be mandatory reading for the countless millions who are intrigued by dinosaurs and their relatives the birds Feduccia points out the many empirical and logical shortcomings in the stubborn majority view that birds evolved from dinosaurs an idea now solidly entrenched as dogma in education and popular culture This new book will be as interesting to those who study human behavior and scientific methods as it will to students of vertebrate evolution David W Steadman Curator of Ornithology Professor of Biology Florida Museum of Natural History University of Florida
