

The male genitalia

- Structures include the penis and scrotum externally
- The testis, epididymis and vas deferens internally

Penis

- Composed of 3 columns of erectile tissue: 2 corpora cavernosa (dorsally) and corpus spongiosum (ventrally)
- At the distal end of the shaft the corpus spongiosum expands into a cone of erectile tissue, the glans
- The shaft is the corona
- The urethra transverses the corpus spongiosum and its meatus forms a slit at the glans tip
- Foreskin: over the glans the skin folds in and back on itself forming a hood or flap
- Frenulum: fold of the foreskin extending from the urethral meatus ventrally

Scrotum

- Loose protective sac and continuation of the abdominal wall
- The scrotal wall consists of thin skin lying in folds called rugae
- Cremaster muscle controls the size of the scrotum by responding to ambient temperature, this is to keep the testes at the best temperature for producing sperm: 3 C
- When it is cold the cremaster muscle contracts raising the sac and bringing the testes closer to the body to absorb heat necessary for sperm viability
- Inside a septum separates the sac into 2 halves in each scrotal half is a testis which produces sperm
- Each testis is oval shaped and compressed laterally, and suspended vertically by the spermatic cord, the left testis is lower than the right because the left's spermatic cord is longer

Male Genitourinary Jarvis Study Guide

Richard Bailey

Male Genitourinary Jarvis Study Guide:

Fuel your quest for knowledge with Learn from is thought-provoking masterpiece, **Male Genitourinary Jarvis Study Guide** . This educational ebook, conveniently sized in PDF (Download in PDF: *), is a gateway to personal growth and intellectual stimulation.
