

2. Adjust the automatic film stopper for the film to be used (120 or 220 roll film). Slide the counter change-over button (3) to show the same figure in the window immediately below the button as that of the film (120 or 220). When 120 shows in the window, the automatic film stopper functions until 12 exposures have been made. When 220 shows in the window, the stopper functions until 24 exposures have been made.

3. Adjust the position of the pressure plate according to the film used. Open the back cover, twist the pressure plate (34) either to the right or left 90 degrees until the red mark on the pressure plate matches either 120 or 220. The figure 120 or 220 will appear in the film indicator window (26), informing the user of the loaded film size when the back cover is closed.

PRECAUTIONS

Observe the previously mentioned steps before loading a roll of film. Especially note that if the pressure plate is not correctly positioned for the size of film used, do not expect sharp, well-focused negatives.

Set the counter change-over button before loading a roll film, and never change it while the film is loaded. Should you carelessly change this button while film is loaded, this is what would happen:

- (1) When the exposure counter number does not exceed 10, and you have not yet released the shutter for the tenth exposure:
 - (a) When 120 is changed to 220, the counter number clicks to 24.
 - (b) When 220 is changed to 120, the counter number stops at 12, and the automatic film stopper no longer functions, freeing the film without stopping.
- (2) When the number is 11 or more, the counter change-over function will not be changed. In this case, the automatic film stopper functions according to the film setting originally made.
- (3) After making 13 or more exposures, should you inadvertently change the counter change-over button which was originally set at 220 to 120, the exposure counter will not return to "0" when the back cover is opened. In this case, twist the counter change-over button back to 220, the exposure counter will return to "0".

☞ Loading and Unloading Film

1. Open the back cover and insert a take-up spool in the take-up spool chamber (29). While turning the film wind knob (4), by turning the indicator for spool-attaching position (28) in the take-up spool chamber toward the operator, attaching the spool becomes very easy. Pull out the spool change knob (30), put the spool into the axis, and reinsert the spool change knob.

2. Pull out the spool change knob (33), and insert a roll of film in the film chamber (32).

PRECAUTIONS

By turning the spool change knobs (30) and (33) either to the right or left after pulling them outward, the knobs stay at their protruded positions. Turn the knobs backward to reinsert them.

If both spool change knobs are not returned to their original positions after loading a film, unbalanced film winding will result. When either spool change knob protrudes freely from the camera body, push it from the outside to its original inserted position.
