

Human Inheritance Lab

Objectives

To determine phenotypic characteristics and genotypes for some heritable traits.
To determine the frequency (%) of dominant and recessive trait in population.

Materials

Class

Procedure

Obtain the phenotypic characteristics and the corresponding gene genotypes for the traits listed below:

- In the first row determine Table 1, but use 27 individuals. (You really want the dominant phenotype and the recessive phenotype. Use the examples in the table but correct for mating)
- In the second column of Table 1, write your phenotype and determine its dominance or recessive.
- In the third column of Table 1, write your genotype based on your phenotype.

Questions

- If you show the recessive trait, then you must be homozygous recessive.
- If you show dominant trait, you may be heterozygous/dominant or homozygous for that trait.
 - If one of your parents shows the recessive trait, then you must have passed on a gene for the recessive trait, and you must be heterozygous for that trait.
 - If neither of your parents shows the recessive trait, you may not know if you are heterozygous or homozygous dominant for that trait. In that case, you **may** provide genotypes (heterozygous and homozygous dominant).

*** If you need to, you may ask your parents about their traits. * DO NOT TALK TO OTHER LAB

TABLE 1: If your name gets recorded below, determine your parents, show your **phenotype** genotypes for dominant/recessive gene.
